NEW WORLD

Who are we

This design system is created for the New World digital experience, serving as the single source of truth for the brand’s website and app. It bridges design and development, ensuring that every interaction, visual element, and component reflects New World’s identity and supports a seamless customer journey.

How we work

The design system is applied across the product lifecycle—from concept and wireframes to production-ready assets. Designers and developers work collaboratively within a shared library of guidelines, fundamentals, and components. This approach improves efficiency, maintains brand consistency, and enables scalable updates across platforms. Design systems will not cover all the specific elements in use, designers and developers can apply the principles we set in this systems and give us feedback if needed.

[Click to view Fiama File](#)

[Click to view Fiama Prototype](#)

Design Principles

Design principles guide the New World website and app to deliver a consistent, accessible, and user-friendly experience. They ensure every element—from product search to checkout—works seamlessly, supporting clear communication and meeting the needs of all customers.

Consistency

Maintain uniform styles and behaviors across all components for a cohesive user experience.

Clarity

Present information and actions in a straightforward and understandable way.

Accessibility

Ensure designs are usable by people of all abilities and assistive technologies.

Inclusivity

Consider diverse user needs, backgrounds, and contexts in every design decision.

Simplicity

Keep interactions and visual elements as minimal as possible without losing functionality.

Visibility

Make key information and actions easily noticeable and available to users.

Design System

This design system provides a unified framework for the New World website and app, ensuring a consistent and accessible user experience across platforms. It is organized into three key sections:
Introductions , Outlines the purpose, structure, and core design principles that guide both designers and developers.
Foundations , Defines the visual foundation, including iconography, colour, and typography.
Design Elements , Details three essential components in the main shopping flow: the search bar for finding products, cards for browsing and comparing items, and buttons for submitting forms.

Each section contains clear specifications and usage guidelines to support cohesive, user-focused design and efficient development.

Annotation guide

The annotation system for this design system is composed of the following four methods, primarily used in the component analysis section.

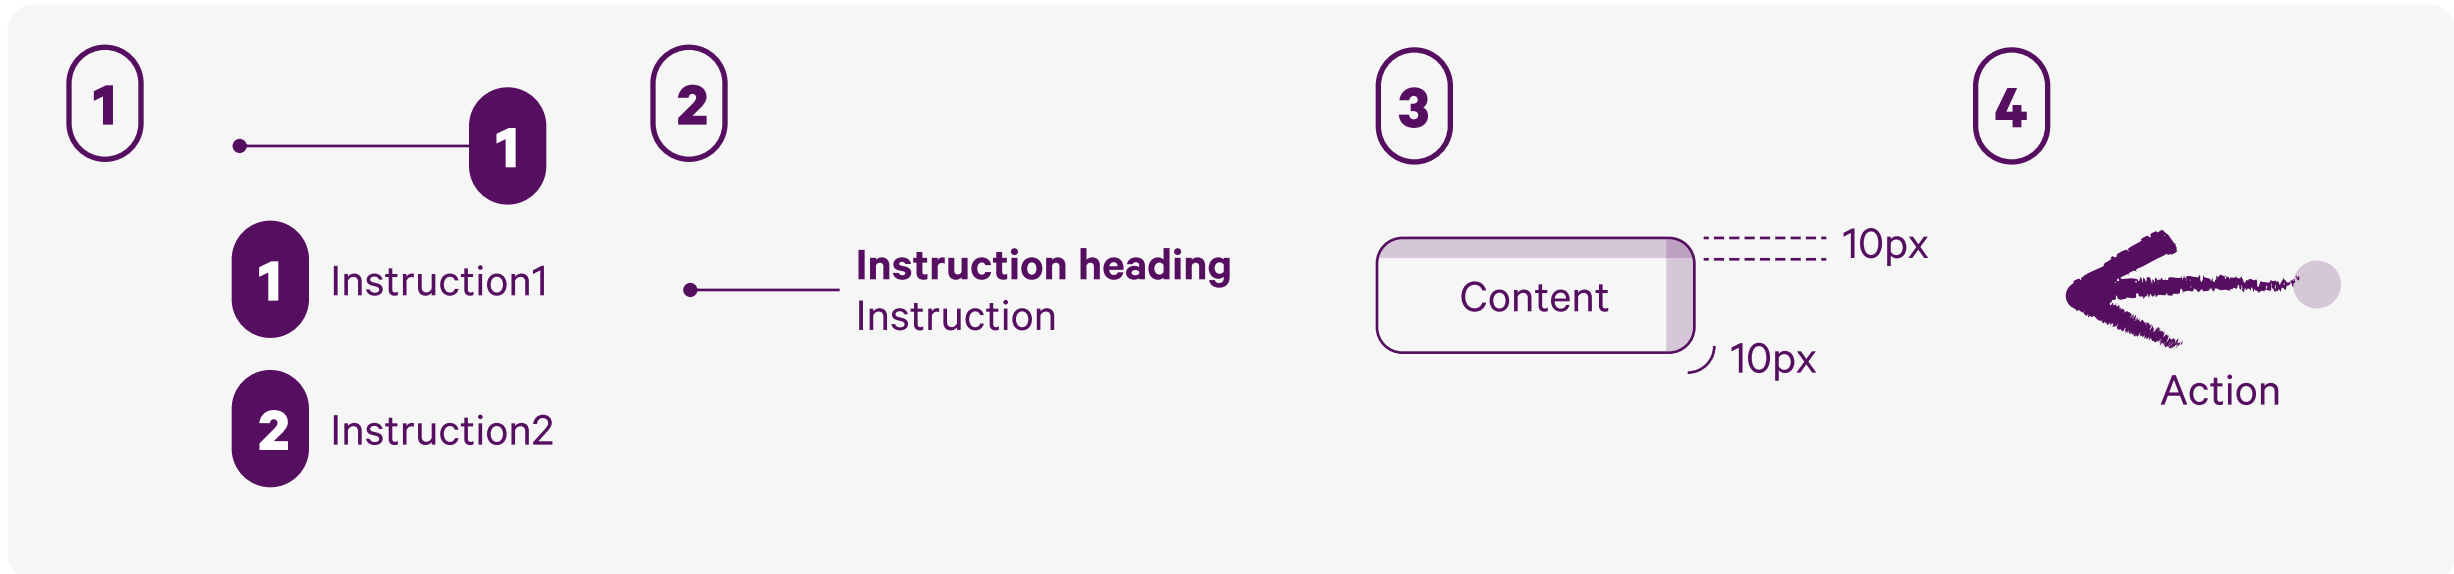

- 1

Anatomy: We use numbered lists to point to and annotate elements, with a text list next to them explaining the function of each specific element.
- 2

Component Analysis: We use dots to lead to a straight line and then add text to explain the annotated content.
- 3

Padding/Gap/other Annotation: We use a semi-transparent purple overlay to display the width.
- 4

Interactive Components: We use hand-drawn arrows to annotate actions.

Icon system

Icons are one of the important elements in the UI system, conveying functional and aesthetic information through concise imagery. Our icon design needs to adhere to principles of simplicity, modernity, friendliness, and clarity, while maintaining consistency with the overall design style. The size and contrast of icons across different platforms must ensure accessibility and proper scaling for effective information communication.

Our icon design style primarily features outline icons, with some icons in different states presented as filled—see the state summary for details. Icons should use simple lines to depict the outline of objects or items, allowing users to understand them at a glance. We convey a welcoming feeling to users through rounded corners and soft stroke endings, embracing New World’s customers.

Library

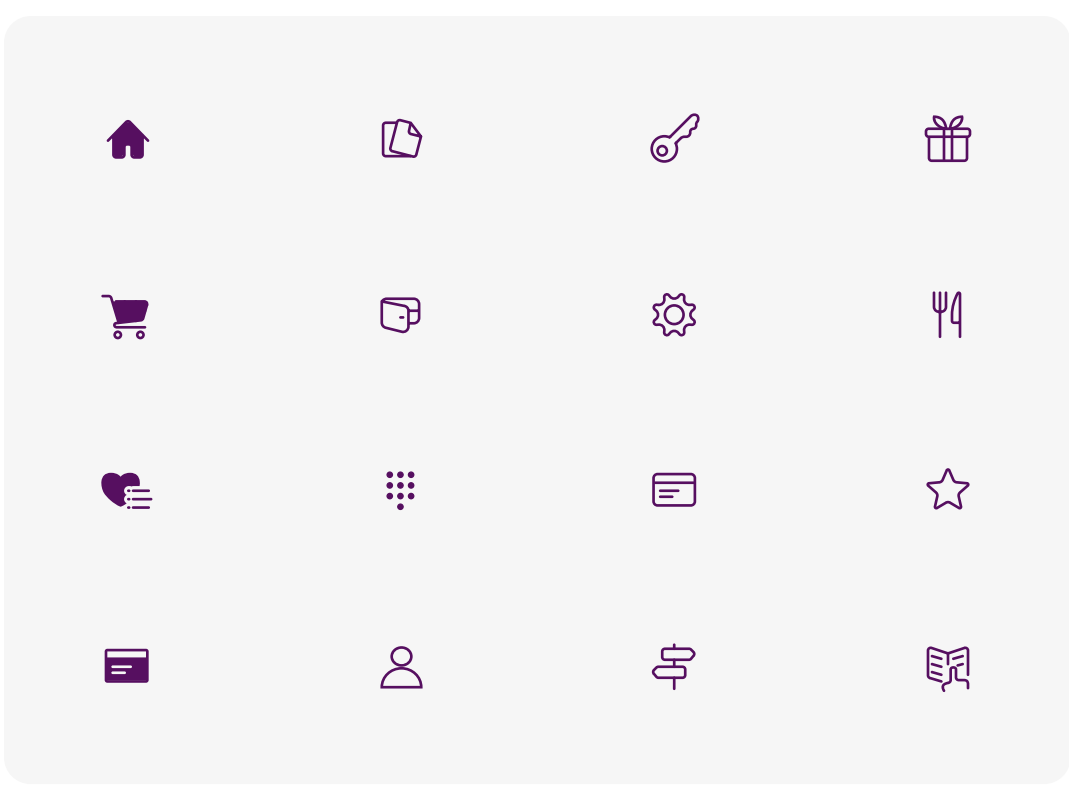

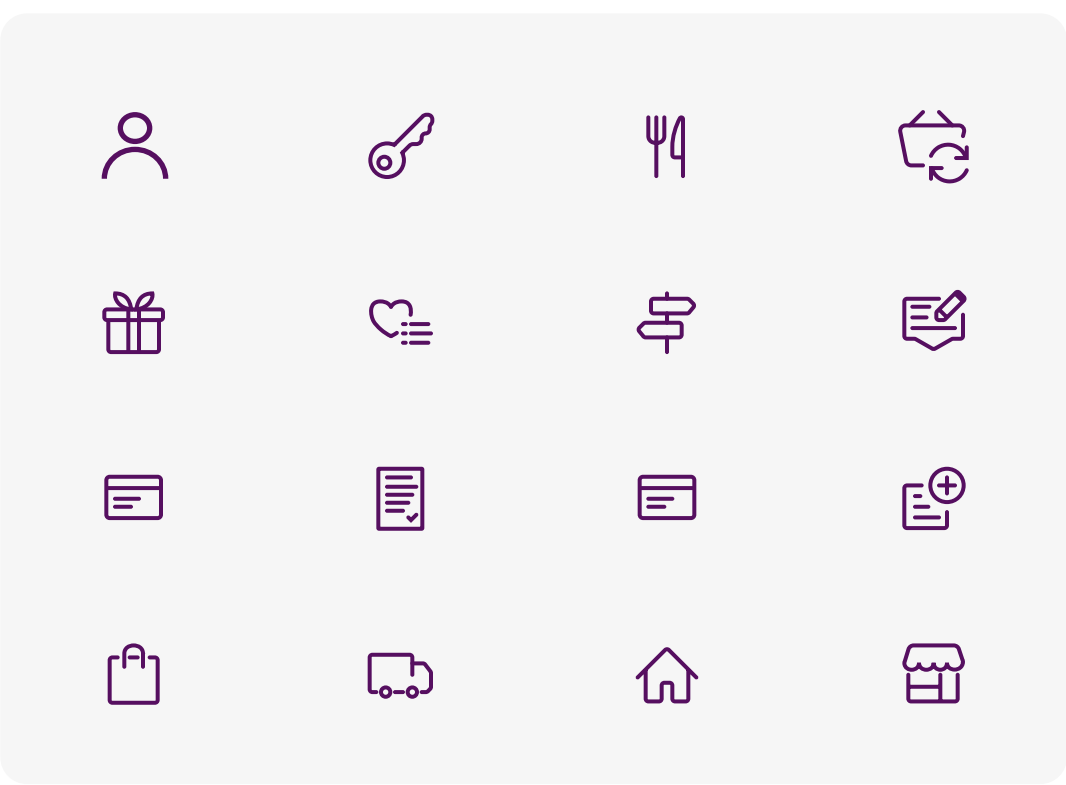

Our icon library includes two icon sizes: 32px for desktop systems and 24px for mobile. Please note that the icon’s net size is not the same as its bounding box size—32px and 24px refer only to the outer boundary used to control icon drawing.

Desktop

32px X 32 px

Mobile

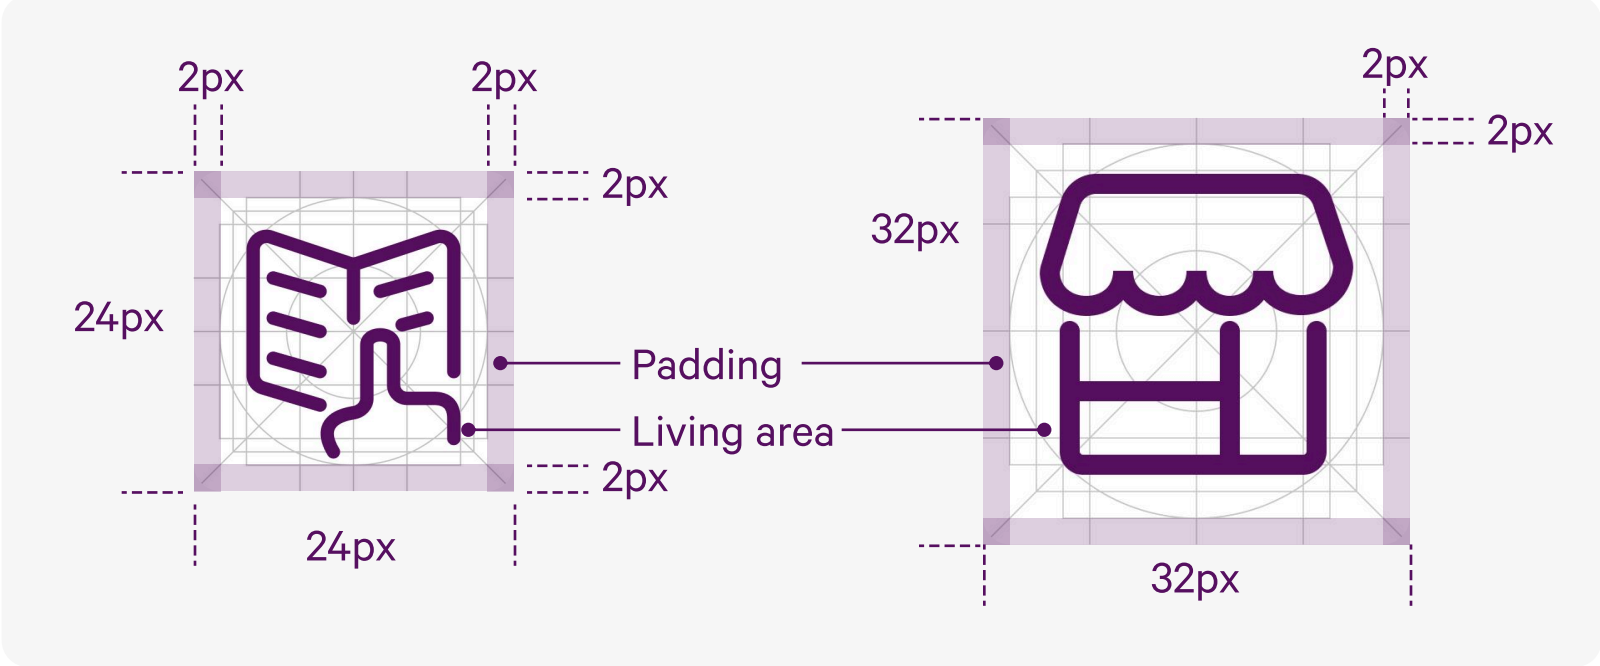

24px X 24 px

Icon Anatomy

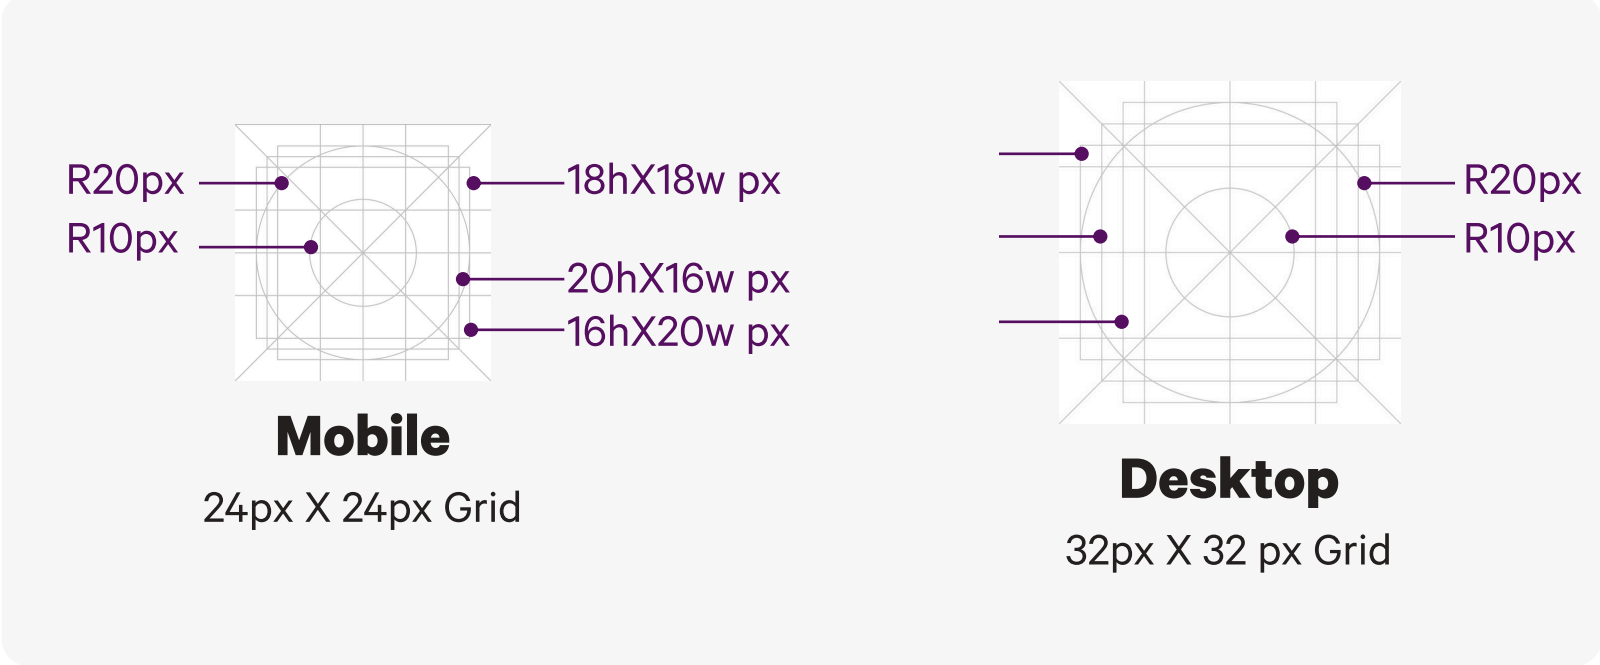

Icon layout

The icon grid system consists of 24×24 and 32×32 grids, corresponding to mobile and desktop respectively. The outermost 2px of the grid serves as padding to control the icon’s outer boundary and prevent potential clipping. The inner area can be used for drawing the icon.

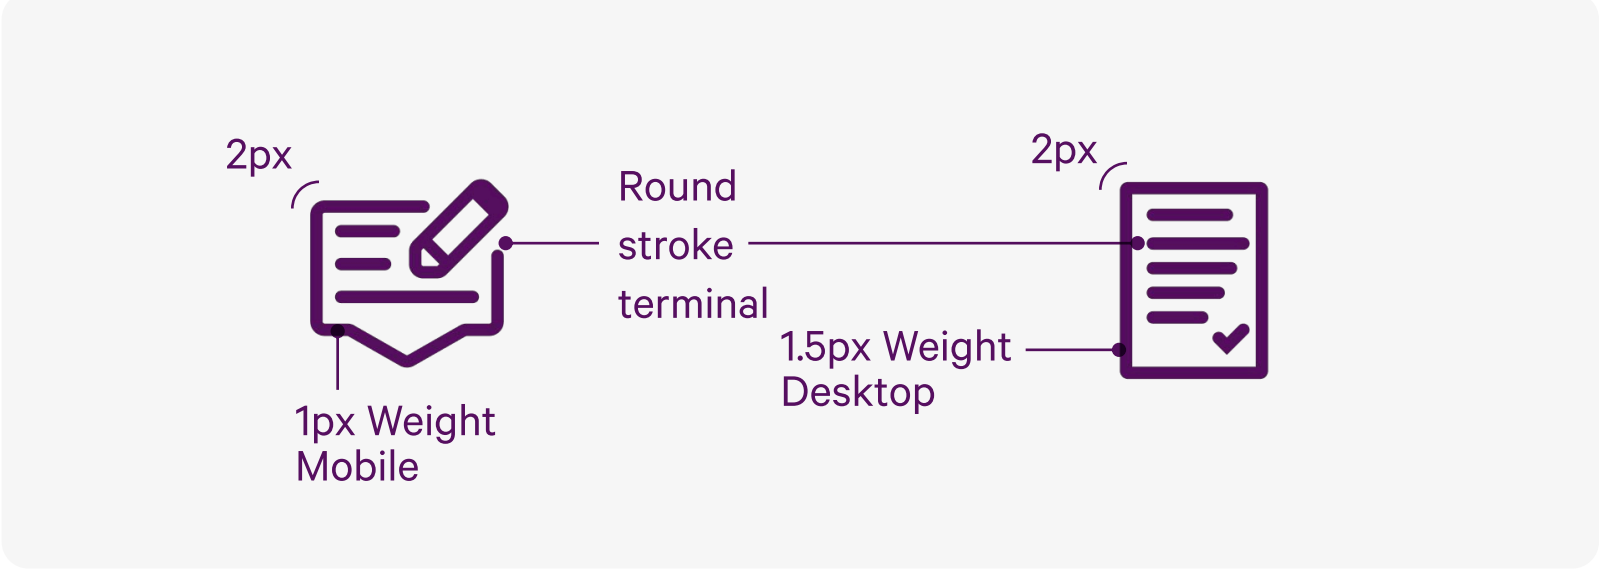

Grid and Keyline

If an icon exceeds the range provided by the design system, you can use this grid system to create the required icon. The grid consists of 24×24 and 32×32 units, with keyline guides to help draw shapes such as circles, rectangles, and squares. These guides help maintain consistency across icons.

Strokes

The default stroke weight for icons is 1.5px on desktop and 1px on mobile. Stroke corners default to 2px, and stroke ends are set to round. The stroke thickness may vary depending on the icon’s complexity and the platform, but it should always follow the principles of consistency and simplicity.

Combination

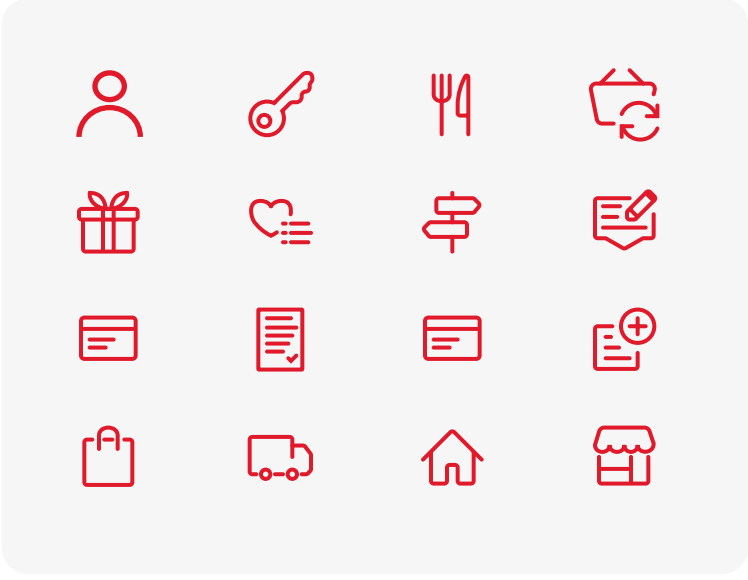

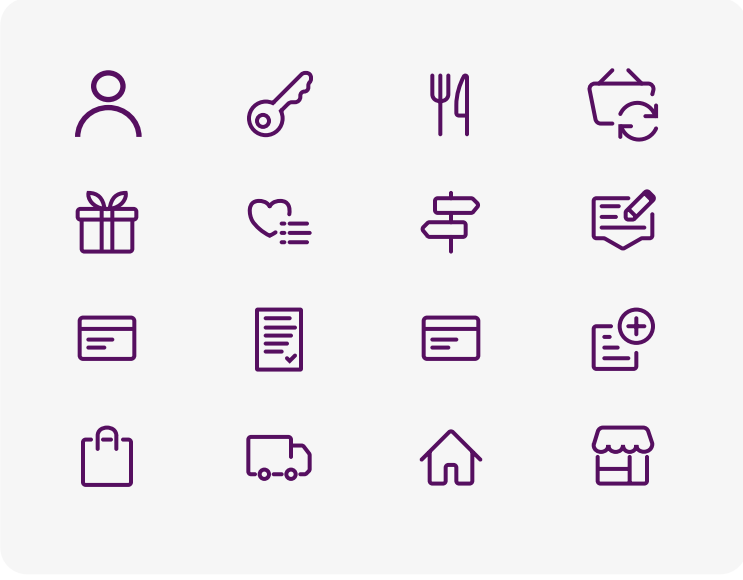

Icons may appear alongside text on different platforms. Please ensure that the icon’s size matches the text size, and that the visual weight of the stroke corresponds proportionally to the text weight. The text accompanying the icon serves as a brief label, so keep the meaning clear and concise.

Variation

Colour

The color of icons varies depending on the usage context. In principle, colors should be the system’s primary red, secondary purple, or brand dark gray. If other colors are needed for specific icons, please select them from the system’s color section, ensuring that the contrast meets the relevant accessibility standards.

Hover to view the Dark mode in AAA contrast

#571060 Purple

Purple icons are generally used across mobile and desktop system account interfaces as well as shopping and selection interfaces.

#E11A2C Red

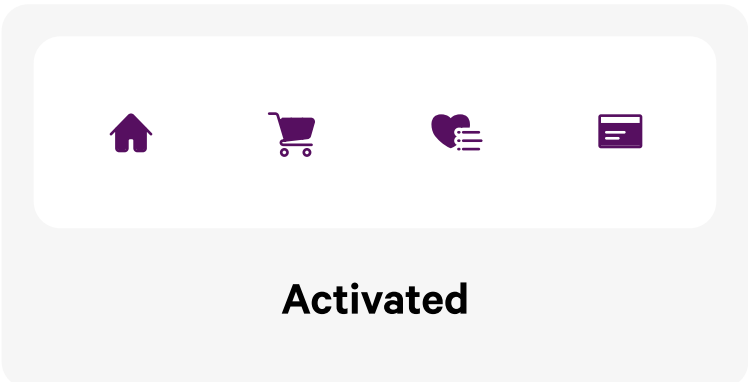

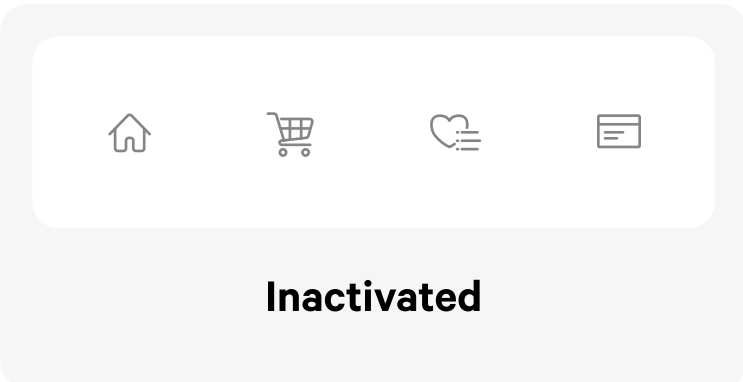

Red icons are typically applied to interfaces related to promotion, marketing, or advertising.

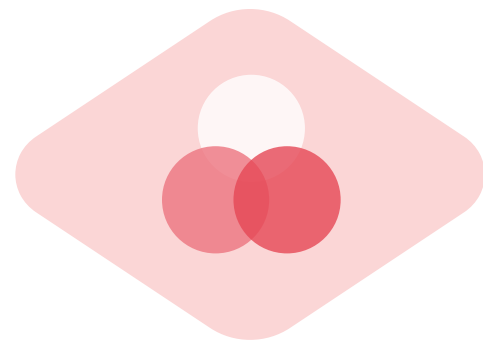

#231F20 Dark Gray

Dark gray icons are generally used in other or standalone interfaces, such as mailers or menus.

State

Our icon system primarily uses outline icons. On mobile navigation bars, filled icons are used to indicate different focus states, with color differentiation as well. This reflects our principles of clarity and visibility. Currently, this variation is applied only to the mobile navigation bar, and future applications in other areas will be updated in this design system. Below is the examples.

Colour system

Our color system follows the New World brand color system, maintaining consistency and alignment with the physical VI system. Both desktop and mobile platforms mainly use five color categories: primary, secondary, monochrome, accent, and sentiment, which help maintain system hierarchy, states, and brand visual identity.

NEW WORLD

Brand Colour

New World’s brand colors use a combination of red, white, and dark gray. A vibrant red is a prominent color in the New World logo and branding, often associated with energy and excitement. The overall color palette aims to convey a sense of quality, freshness, and a “feel good” experience for shoppers. This color scheme appears across New World’s physical stores, print media, and digital products.

Red	Gray	White
#E11A2C rgb(225,26,44)	#231F20 rgb(35,31,32)	#FFFFFF rgb(255,255,255)

Primary

Red is the primary color in the New World design system, used in various interactive scenarios except for backgrounds, including promotional pages, buttons, and areas that need to attract user attention. In addition to the base shade, it has darker and lighter variants for different states of banners or buttons within the same color family. Red also comes with various tints and shades for use in different modes. Designers can apply them according to the specific context, but please ensure that contrast meets accessibility standards.

Base	Light	Dark
#E11A2C rgb(225,26,44)	#FCD7D7 rgb(252,215,215)	#CB1728 rgb(203,23,40)

------------------------------------	------------------------------------	----------------------------------	----------------------------------	----------------------------------	----------------------------------	----------------------------------	----------------------------------	---------------------------------

Secondary

Purple is the secondary color in our design system, primarily used in interactive scenarios, such as icons and CTA buttons, in areas related to user information and actions. Similarly, purple has darker and lighter variants to represent different interaction states. It also comes with tints and shades for use in different modes, providing designers with flexible options.

Base	Light	Dark

------------------------------------	------------------------------------	-----------------------------------	------------------------------------	-----------------------------------	---------------------------------	---------------------------------	---------------------------------	--------------------------------

Monochrome

Our monochrome system is based on neutral black and white, complemented by two ranges of gray in varying shades, used for text and backgrounds of different colors. It provides color options with varying contrast levels.

Base

White	Black
#FFFFFF rgb(255,255,255)	#000000 rgb(0,0,0)

Light Gray

#F9F9F9 rgb(249,249,249)	#F6F6F6 rgb(246,246,246)	#EEE7EF rgb(238,231,239)	#E0E0E0 rgb(224,224,224)	#CCCCC rgb(204,204,204)	#ADADAD rgb(173,173,173)	#858585 rgb(133,133,133)	#757575 rgb(117,117,117)	#666666 rgb(102,102,102)
------------------------------------	------------------------------------	------------------------------------	------------------------------------	-----------------------------------	------------------------------------	------------------------------------	------------------------------------	------------------------------------

Dark Gray

#616161 rgb(97,97,97)	#5C5C5C rgb(92,92,92)	#333333 rgb(51,51,51)	#292929 rgb(41,41,41)	#231F20 rgb(35,31,32)	#1F1F1F rgb(31,31,31)	#141414 rgb(20,20,20)	#121212 rgb(18,18,18)	#0D0D0D rgb(13,13,13)
---------------------------------	---------------------------------	---------------------------------	---------------------------------	---------------------------------	---------------------------------	---------------------------------	---------------------------------	---------------------------------

Accent

The accent color system provides additional colors that complement the primary and secondary palettes, enhancing visual hierarchy and drawing attention where needed. This series includes promotional colors, designed to highlight marketing or campaign-related elements, and background colors, optimized for use on various background types to ensure readability and visual balance.

Promotion

Promotion colors are mainly used in combination for three types of promotional labels on the New World platform, with red and dark gray being two of the brand colors.

#005EB8 rgb(0,94,184)	#E11A2C rgb(252,26,44)	#FFF200 rgb(255,242,0)	#231F20 rgb(35,31,32)
---------------------------------	----------------------------------	----------------------------------	---------------------------------

Background

Background colors in the accent palette differ from the surface background colors of the platform’s pages. They are mainly used as background colors for theme images on various non-shopping pages of the desktop platform.

#00B4B9 rgb(0,180,185)	#8C1446 rgb(140,20,70)	#FFDB7F rgb(255,219,127)	#033064 rgb(3,48,100)
----------------------------------	----------------------------------	------------------------------------	---------------------------------

#00B4B9 serves as the tertiary color on the mobile platform and is used as the background color for promotional images.

Sentiment

Sentiment colors convey specific states or messages within the interface, helping users quickly recognize intent and respond appropriately. They provide consistent visual cues for feedback, alerts, and guidance.

Focus

Draws attention to an active or important element that requires user interaction.

#009DFF rgb(0,157,255)	#095FC7 rgb(9,96,199)
----------------------------------	---------------------------------

Information

Communicates neutral, helpful details without urgency.

Text	Border	Background
#004085 rgb(0,64,133)	#B8DAFF rgb(184,218,255)	#CDE5FD rgb(205,229,253)

Success

Indicates a positive outcome or confirmation of an action.

#155724 rgb(21,87,36)	#C3E6CB rgb(195,230,203)	#D5EDDB rgb(213,237,219)
---------------------------------	------------------------------------	------------------------------------

Warning

Signals caution and prompts users to review before proceeding.

#856404 rgb(133,100,4)	#FFEEBA rgb(255,238,186)	#FFF3D0 rgb(255,243,208)
----------------------------------	------------------------------------	------------------------------------

Error

Alerts users to a problem that needs immediate attention or correction.

#721C24 rgb(114,28,36)	#F6C6CC rgb(246,198,204)	#F8D7DA rgb(248,215,218)
----------------------------------	------------------------------------	------------------------------------

Example

This is an example of an information notification.

	Some of the items in your cart may have limits. If your order exceeds the advertised limit, you may only receive the limited amount.
---	--

Contrast

In our design system, the contrast between various text and background combinations must meet the requirements of WCAG 2.2. The following examples show primary text colors applied on different backgrounds and do not represent all possible color combinations.

#E11A2C Aa Legible Aa Illegible Aa Illegible Aa Illegible Aa Illegible Aa Illegible	#231F20 Aa Legible Aa Illegible Aa Illegible Aa Illegible Aa Illegible Aa Illegible	#571060 Aa Legible Aa Illegible Aa Illegible Aa Illegible Aa Illegible Aa Illegible	#794080 Aa Legible Aa Illegible Aa Illegible Aa Illegible Aa Illegible Aa Illegible	#EEE7EF Aa Illegible Aa Illegible Aa Illegible Aa Legible Aa Legible Aa Legible	#F6F6F6 Aa Illegible Aa Illegible Aa Illegible Aa Legible Aa Legible Aa Legible

Typeface system

The typography system for both desktop and mobile versions of New World uses the Calibre font. Hierarchies such as titles, headings, subtitles, body text, and labels are distinguished through parameters including font size, weight, and line height. If Calibre is not available on the user's system, a sans-serif font will be used as a fallback.

Calibre

Regular 400Medium 500Semibold 600Bold 700

Replaced with Sans-serif if missed the Calibre font

Aa

Text style and size

Desktop

The desktop font system is divided into three categories: heading, label, and body. The largest heading size is 56px, with other font sizes detailed in the table below. Titles and subtitles on web pages, as well as promotional headings, are primarily selected from the heading category. Other paragraph text is generally set at 1.5 times smaller than the corresponding heading size.

Use	Typeface	Size	Weight	Line height
Heading1	Calibre, sans-serif	56px	700 Bold	56px 1em
Heading2	Calibre, sans-serif	40px	700 Bold	44px 1.1em
Heading3	Calibre, sans-serif	32px	700 Bold	36px 1.1em
Heading4, Link	Calibre, sans-serif	24px	700 Bold	36px 1.2em
Heading5	Calibre, sans-serif	22px	400 Regular	28px 1.3em
Heading6	Calibre, sans-serif	20px	700 Bold	20px 1em
Label1	Calibre, sans-serif	20px	400 Regular	22px 1.1em
Label2	Calibre, sans-serif	18px	400 Regular	22px 1.2em
Body1, Link	Calibre, sans-serif	18px	600 Semibold	22px 1.2em
Body2	Calibre, sans-serif	18px	400 Regular	22px 1.2em
Body3, Link	Calibre, sans-serif	16px	600 Semibold	20px 1.3em
Body4	Calibre, sans-serif	16px	400 Regular	20px 1.3em
Body5	Calibre, sans-serif	14px	400 Regular	14px 1em
Body6	Calibre, sans-serif	12px	400 Regular	12px 1em

Mobile

The maximum font size on mobile is 40px, primarily consisting of heading and body categories. Mobile font sizes are generally one level smaller than their desktop counterparts. The smallest font, used for captions, remains 12px, the same as on desktop. The minimum body text size is 16px, which also corresponds to 1em.

Use	Typeface	Size	Weight	Line height
Heading1	Calibre, sans-serif	40px	700 Bold	44px 1.1em
Heading2	Calibre, sans-serif	32px	700 Bold	36px 1.1em
Heading3	Calibre, sans-serif	28px	600 Semibold	32px 1.1em
Heading4	Calibre, sans-serif	24px	700 Bold	28px 1.2em
Heading5	Calibre, sans-serif	22px	400 Regular	28px 1.3em
Heading6, Link	Calibre, sans-serif	20px	700 Bold	20px 1em
Body1, Link	Calibre, sans-serif	18px	600 Semibold	20px 1.1em
Body2	Calibre, sans-serif	18px	400 Regular	20px 1.1em
Body3, Link	Calibre, sans-serif	16px	600 Semibold	20px 1.3em
Body4	Calibre, sans-serif	16px	400 Regular	20px 1.3em
Body5	Calibre, sans-serif	14px	400 Regular	14px 1em
Body6	Calibre, sans-serif	12px	400 Regular	12px 1em

Alignment

Align left

Paragraphs in promotional content are center-aligned.

Redeem your SMEG Kitchenware

Take a peek at the beautiful SMEG range waiting for you. Collect your stickers, and one of these could soon be yours, just by doing your normal shop! While stocks last. T&Cs apply.

Align center

Paragraphs for other content, such as providing information to users, are left-aligned.

Items you've bought before

When you shop online or scan your Clubcard in store regularly we'll show your frequently shopped items products here. Log in or register to start shopping today.

Paragraph spacing

Paragraph spacing is generally determined as 1.33 times the paragraph font size (1.33em).

Lorem Ipsum is simply dummy text of the printing and typesetting industry. Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book. It has survived not only five centuries, but also the leap into electronic typesetting, remaining essentially unchanged.

Buttons

Cards

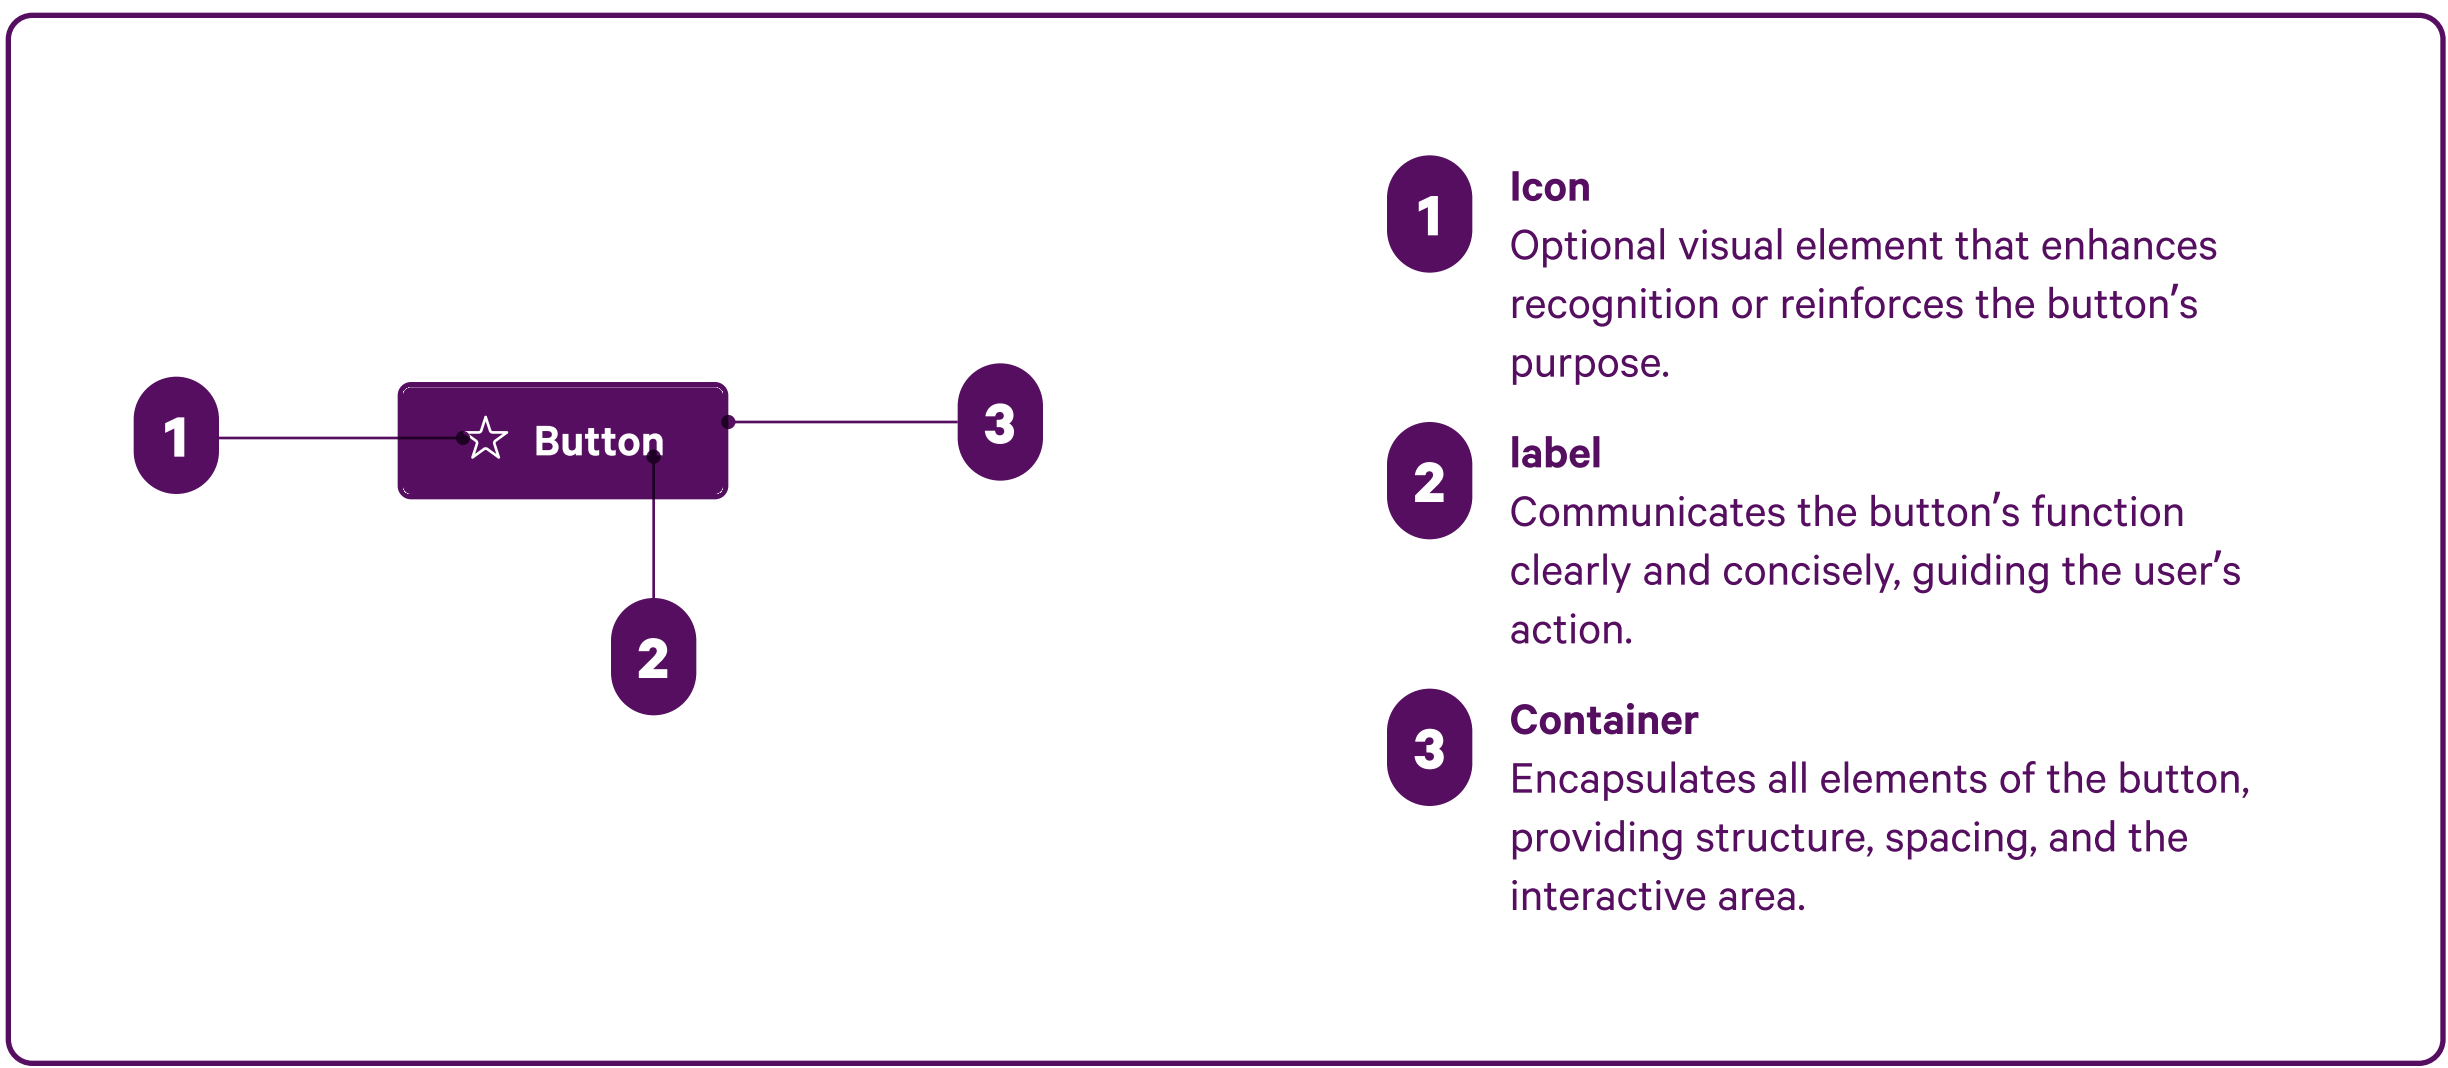

Search

Button system

The New World button system primarily guides users’ interactive actions. It consists of several types of buttons: filled, tonal, outlined, icon, and text buttons. Different levels of visibility are used on the interface to indicate varying levels of interaction hierarchy.

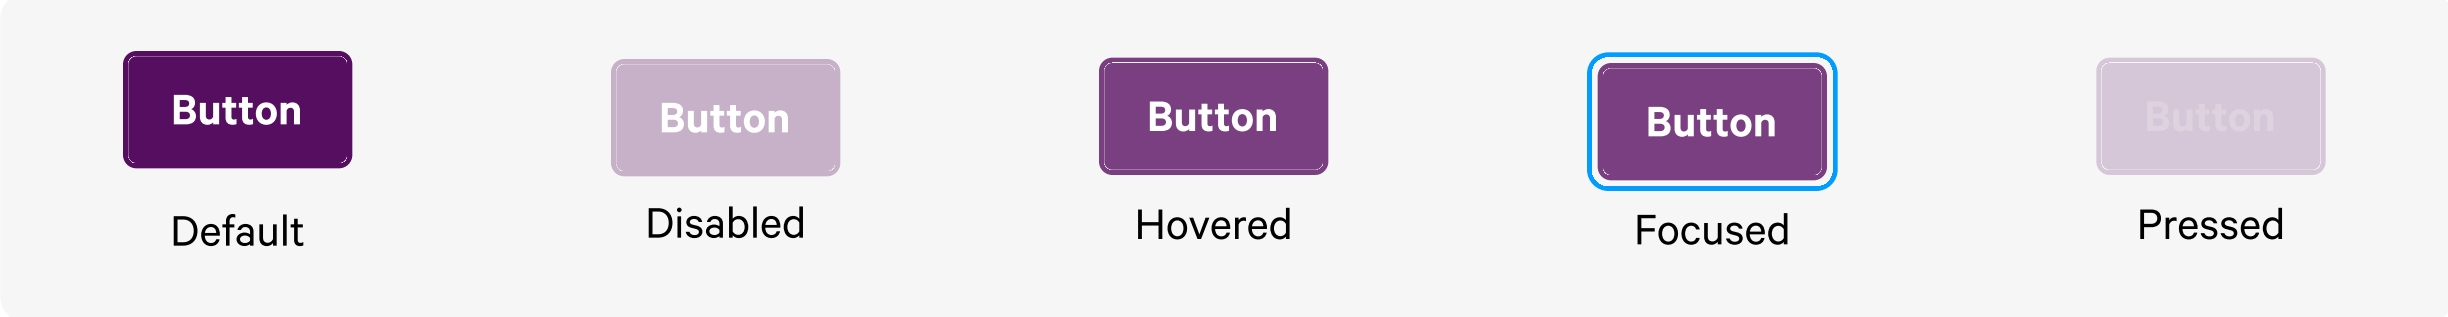

Anatomy

A button consists of an icon, a label, and a container. The icon is optional, the label represents the button’s function and follows clear and concise UX writing principles, and the container holds all elements of the button.

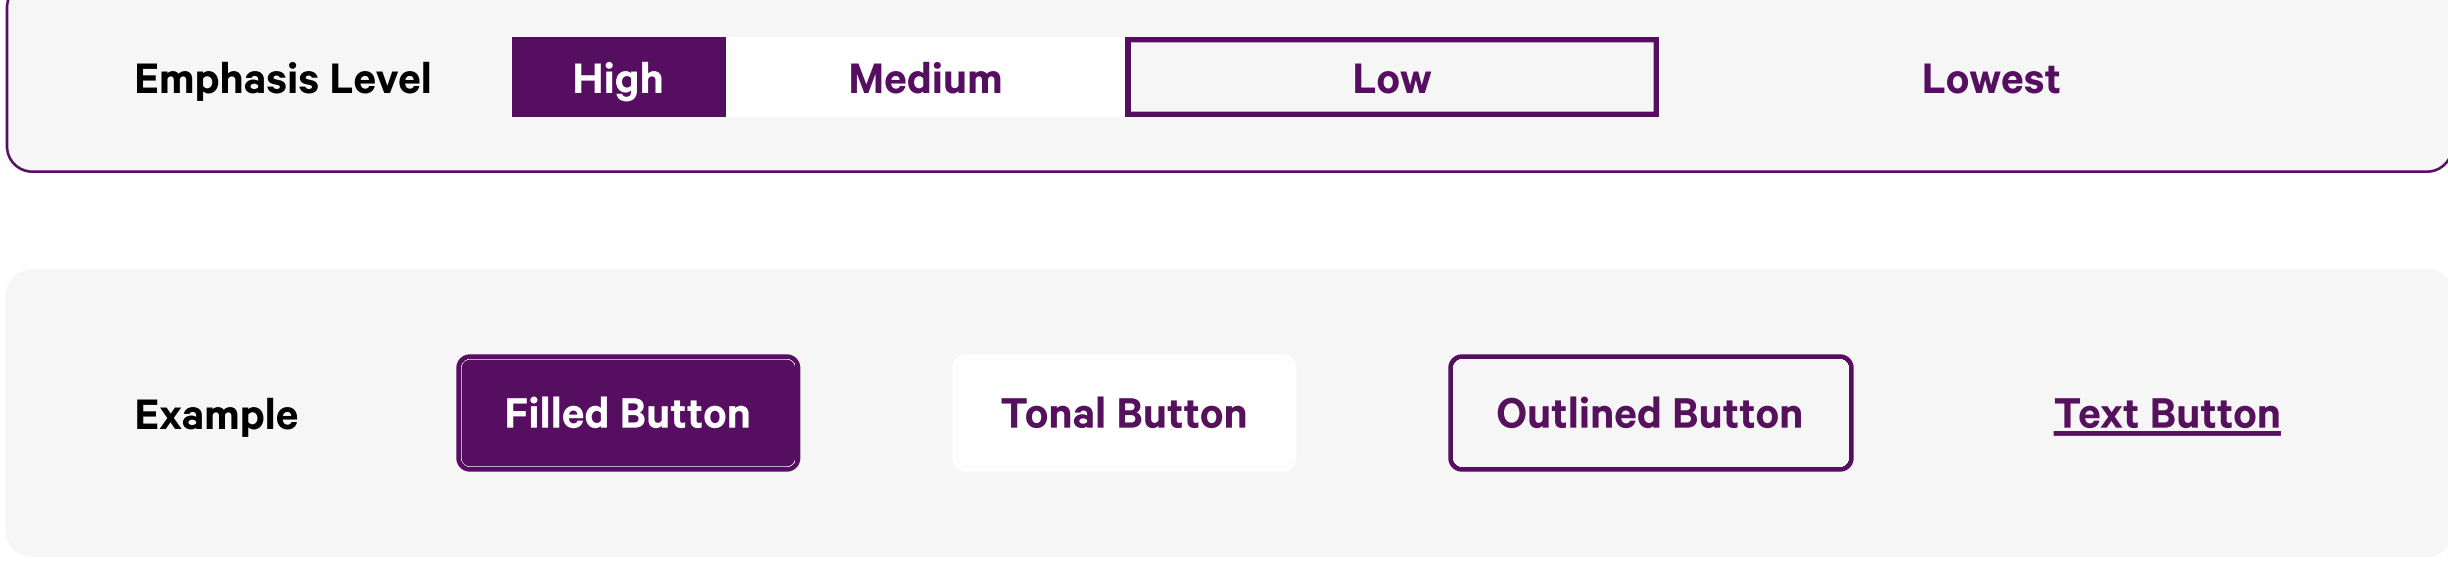

Button states

In our design system, buttons have several states to reflect user interaction: default represents the normal, inactive state; disabled indicates that the button is not available for interaction; focused shows that the button is currently selected or ready for input; hovered appears when the user’s cursor is over the button, providing visual feedback; and pressed indicates that the button is being clicked or tapped.

Button Hierarchy

The hierarchy of buttons is related to the level of emphasis in prompting user interaction. In our design system, differences in color depth, presence of borders, and the number of component elements are used to distinguish button levels. Higher-level buttons require stronger user engagement through clicks and interactions, but appear less frequently in the interface. From highest to lowest, our button types are: filled, tonal, outlined, and text (including text buttons with icons).

Types of Buttons

The following are specific usage guidelines for each type of button in our design system. This guide covers only the standard button types. If new combinations arise due to added or adjusted design functions, please design them in accordance with the rules and principles of this system. Except the text button, the font type used in desktop is Body2. Notice: Pressed state is mostly used on mobile platform.

Filled Button

Filled buttons use solid backgrounds to create the highest visual emphasis and drive primary actions.

Weight 2px

Text Button

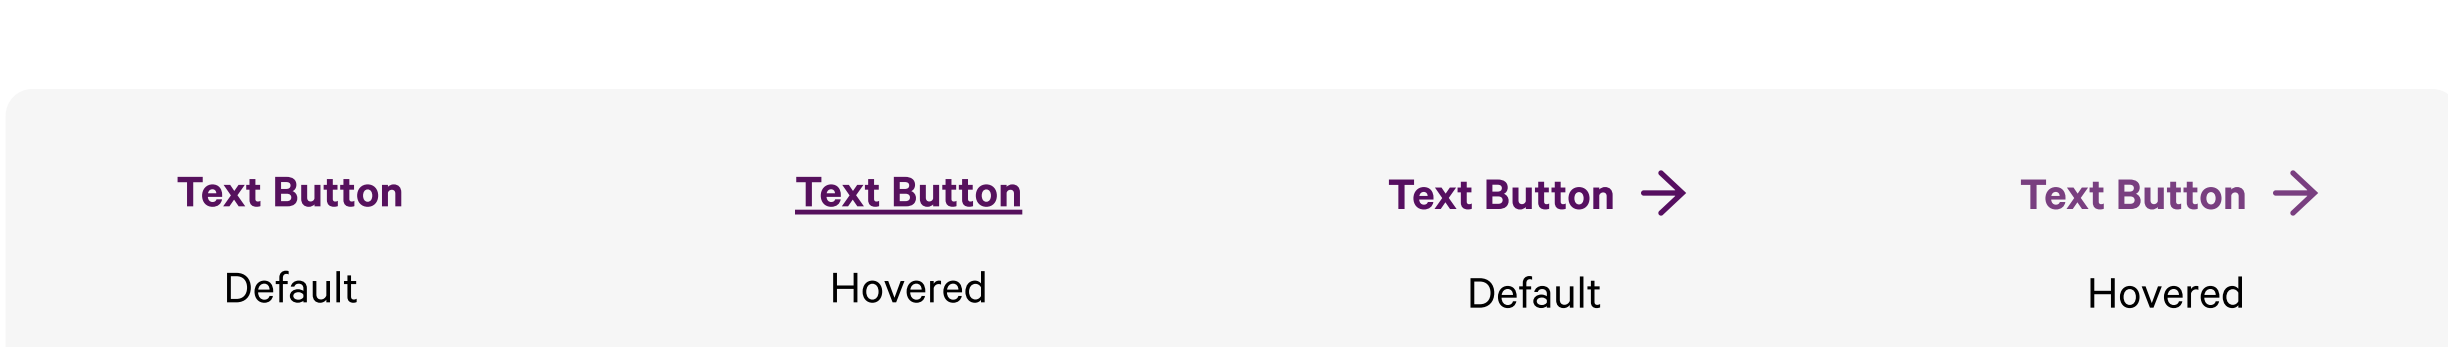

Text buttons have no background or border, providing the least emphasis for subtle or inline actions.

Text

Icon(Optional)

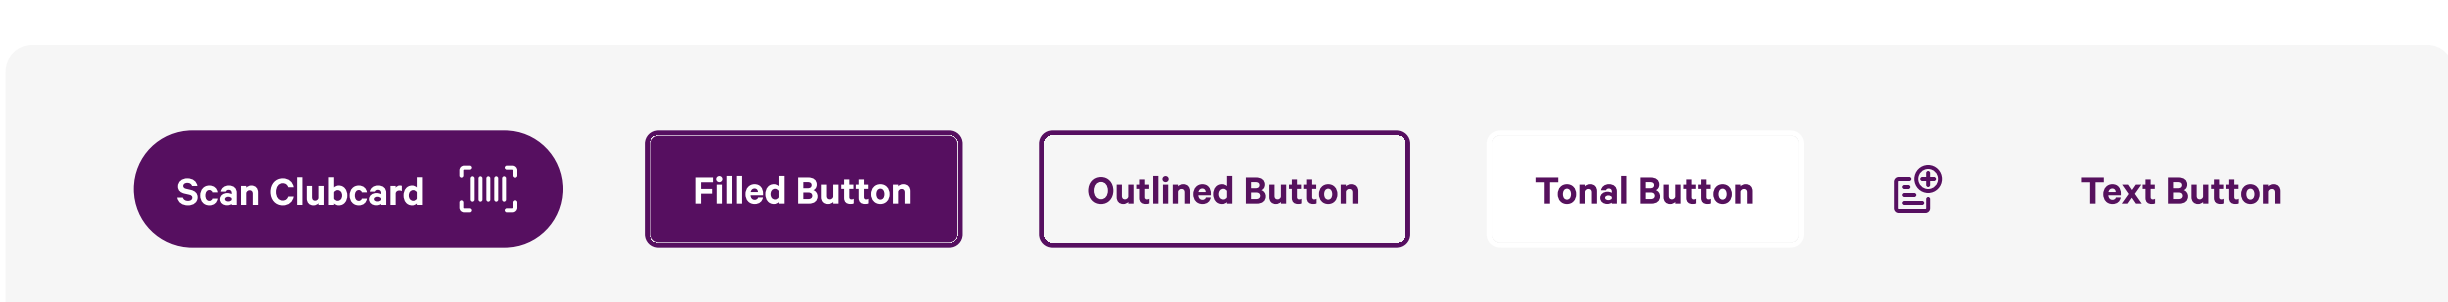

Text Button

Gap=10px

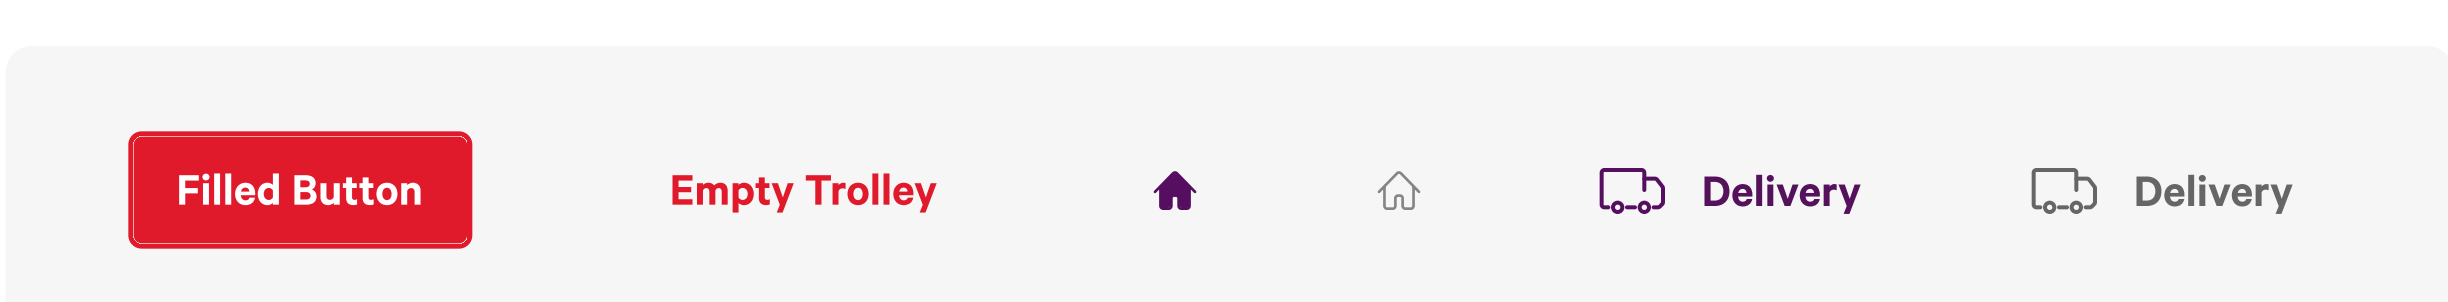

Mobile

The button types on mobile are generally consistent with those on desktop, with the main difference being that in the mobile purchase flow, the highest-priority action button is an outlined button instead of a filled one. The “Scan Clubcard” button has a radius of 40px. Additionally, except the text button, button text on mobile is uniformly set to the Body 3 type.

Colour Variation

On both mobile and desktop, the primary button color is the secondary purple. However, in certain interfaces that remind or prompt users, or in promotional contexts, the primary red may be used selectively. For disabled states, gray can be used as an alternative. Below are some examples.

Cards

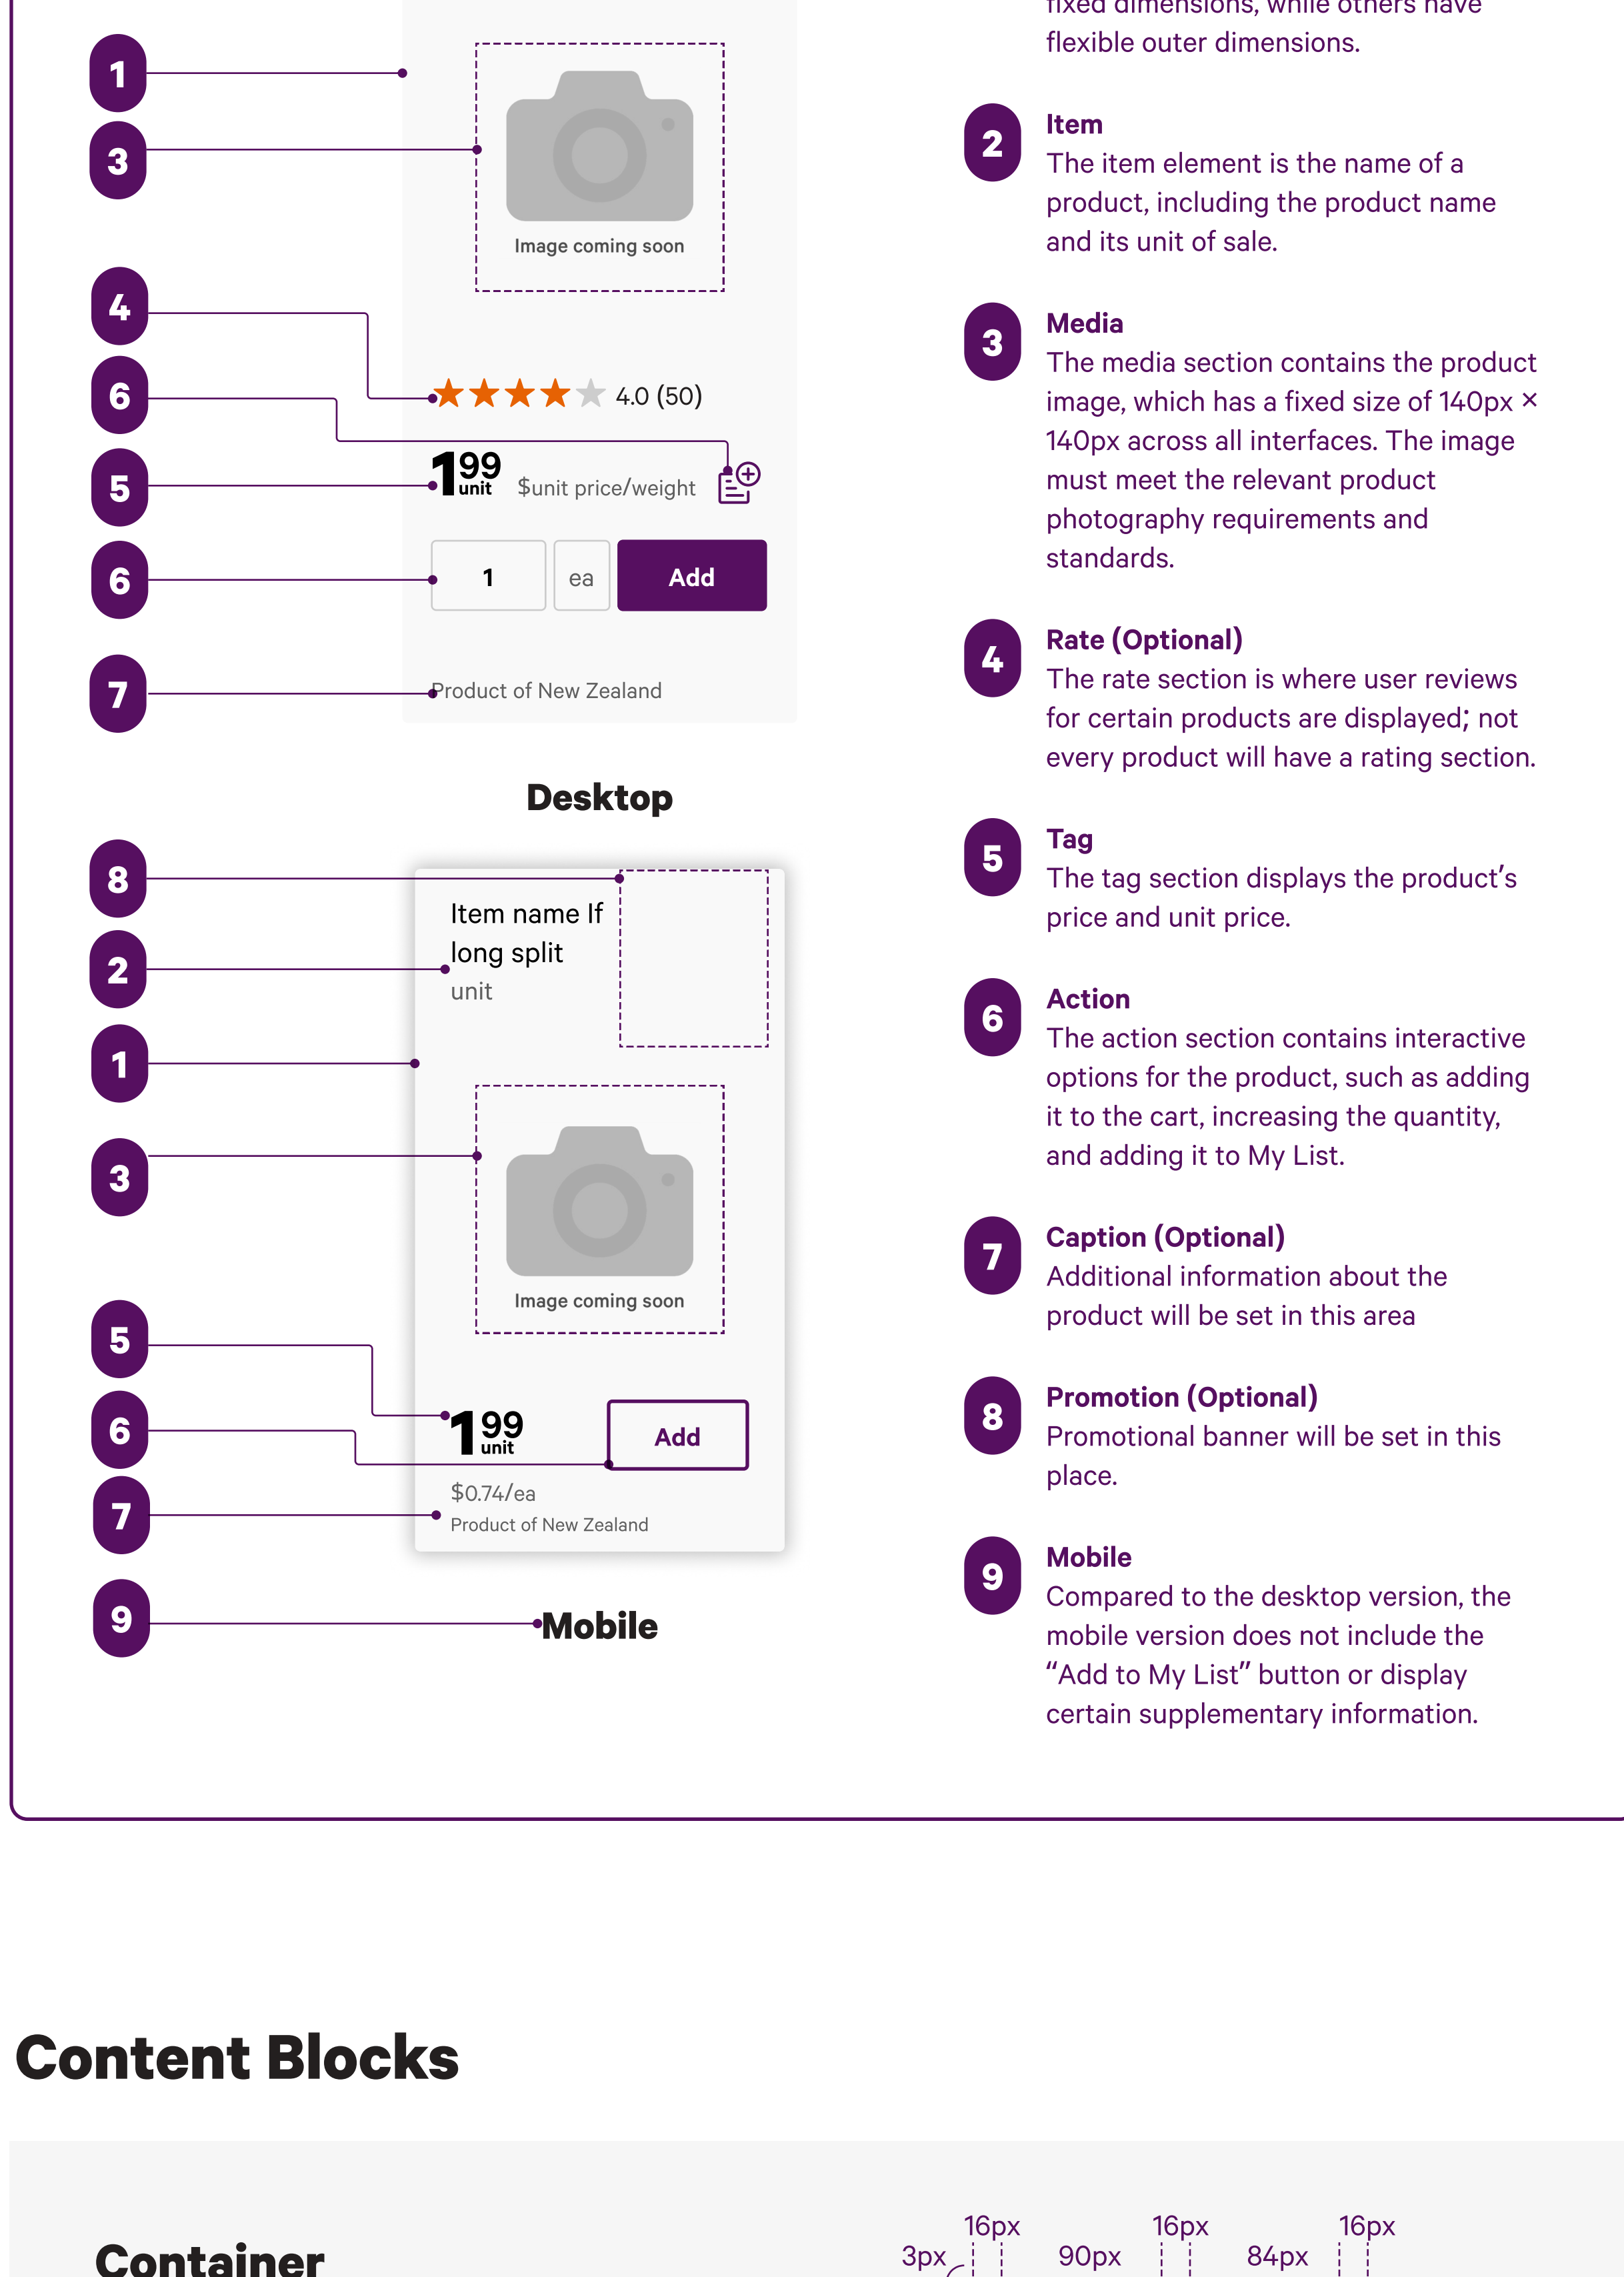

Search

Card system

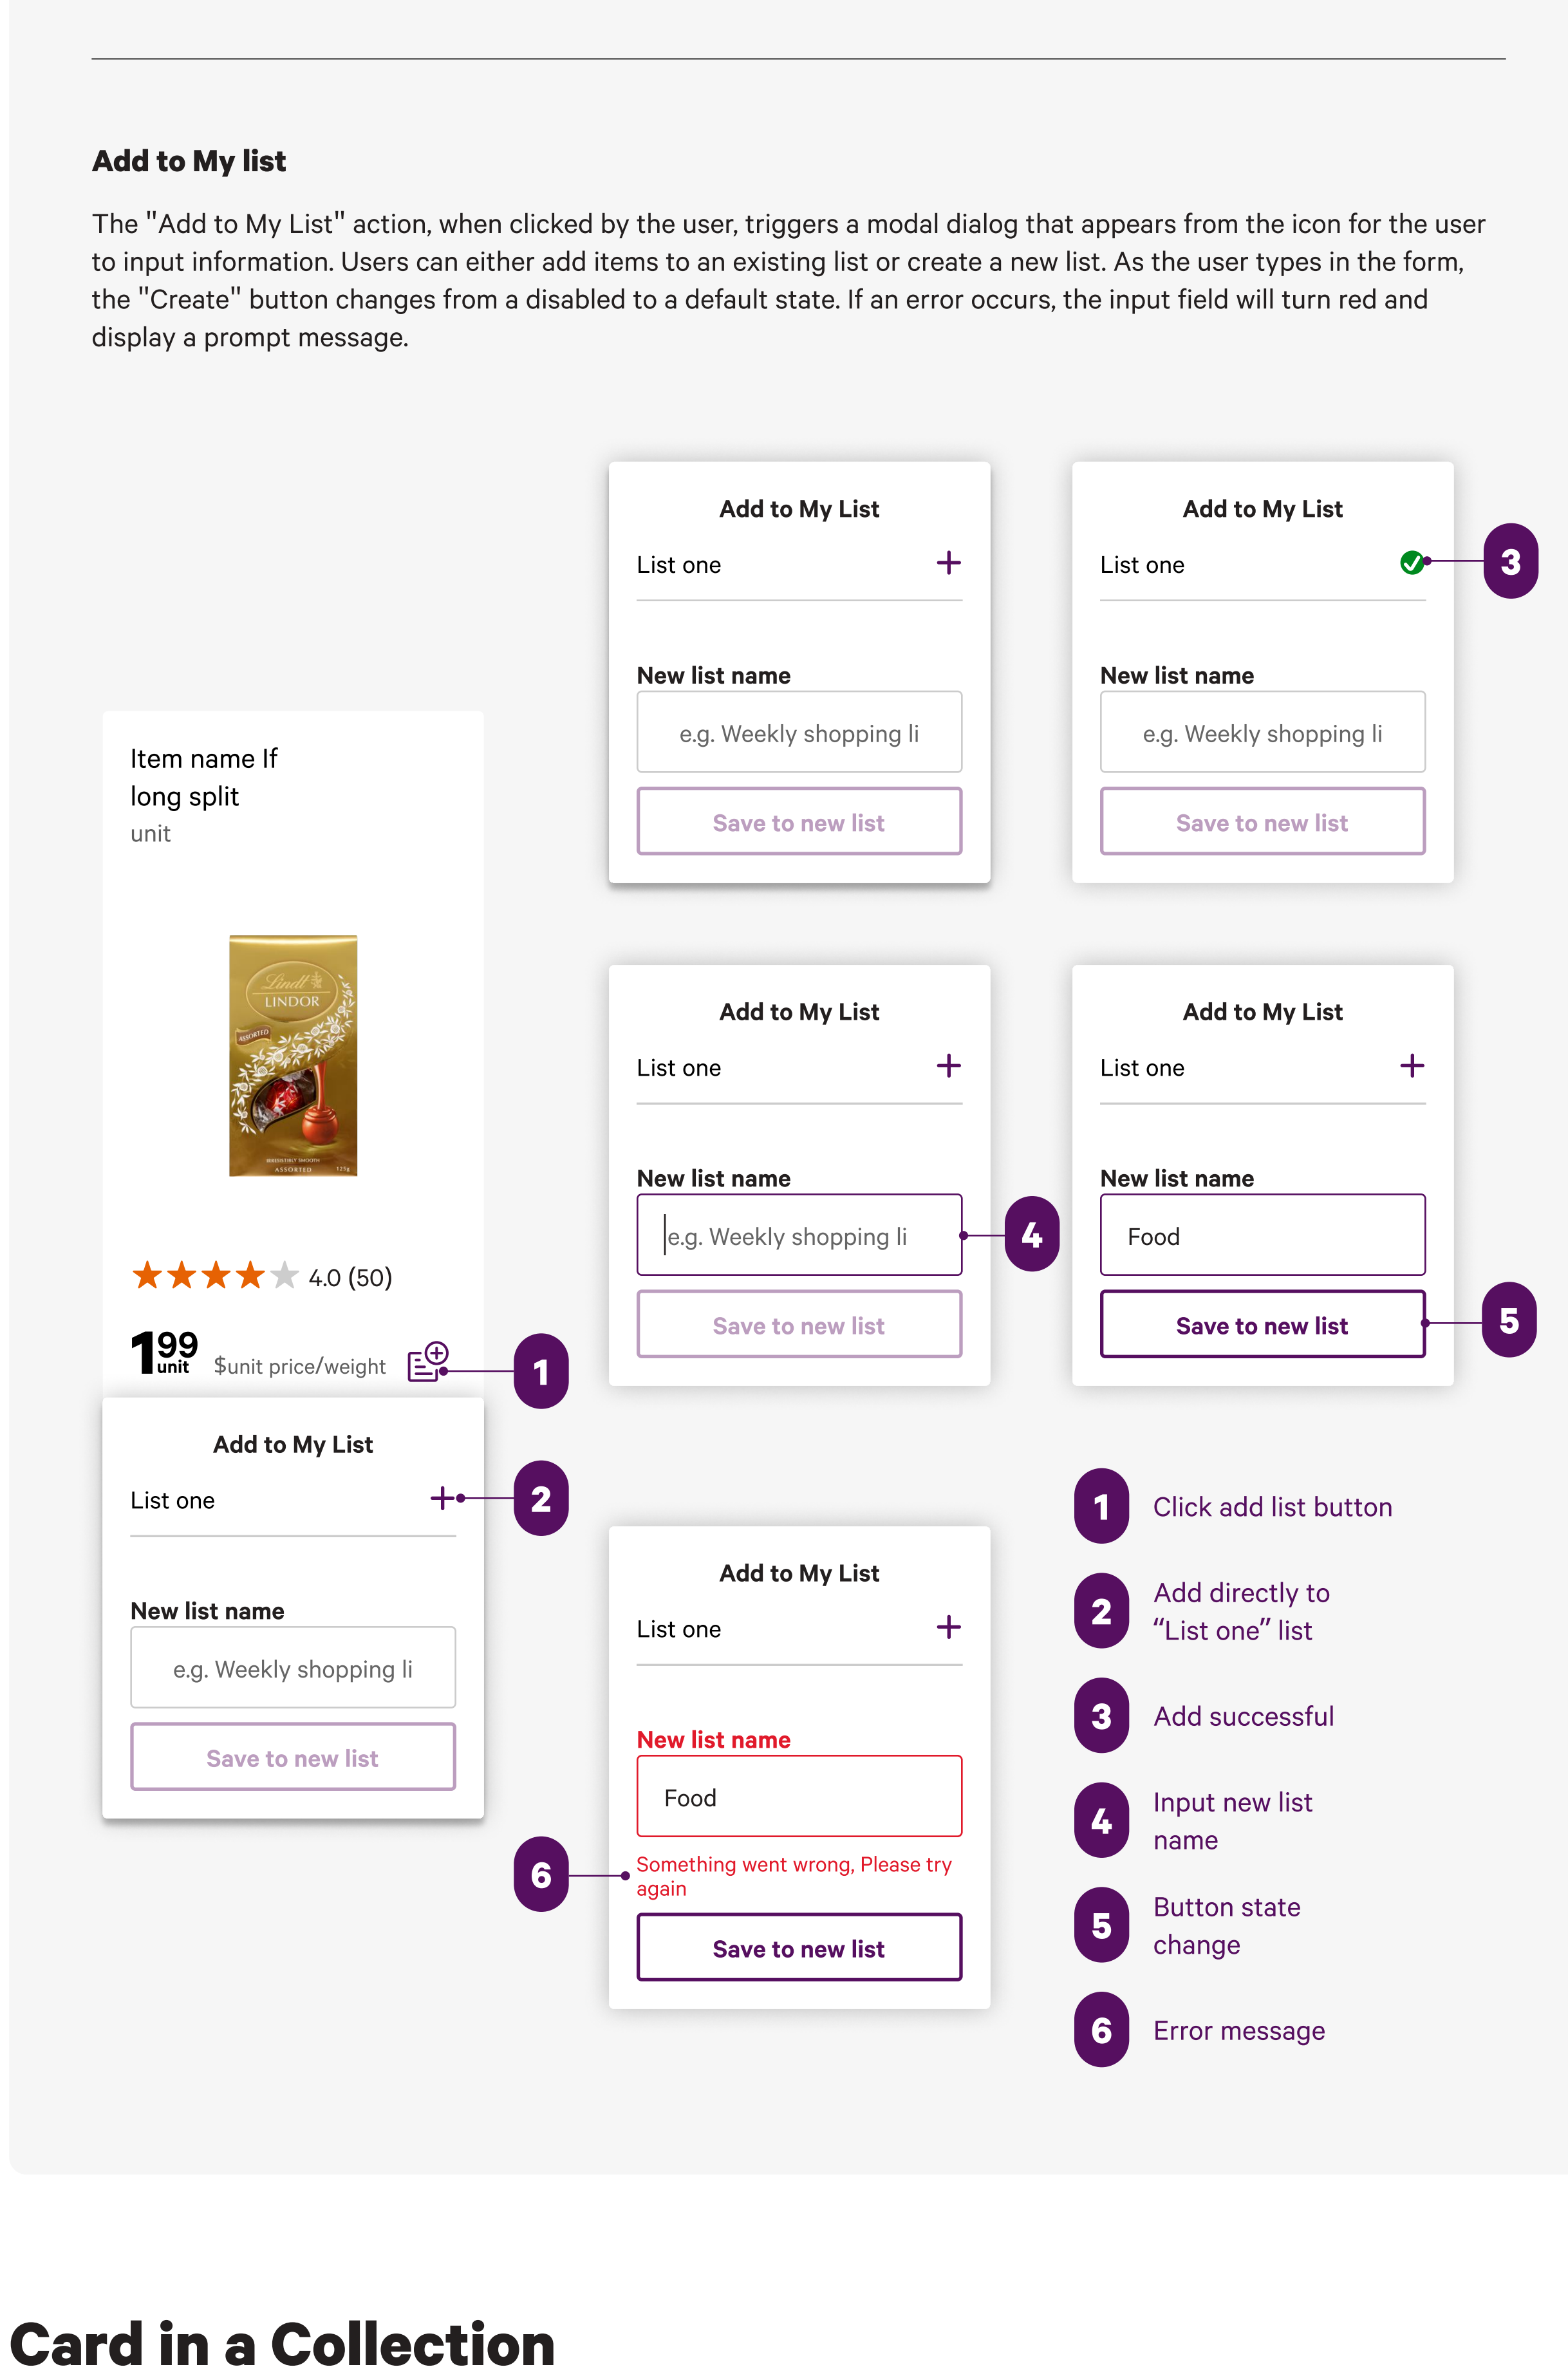

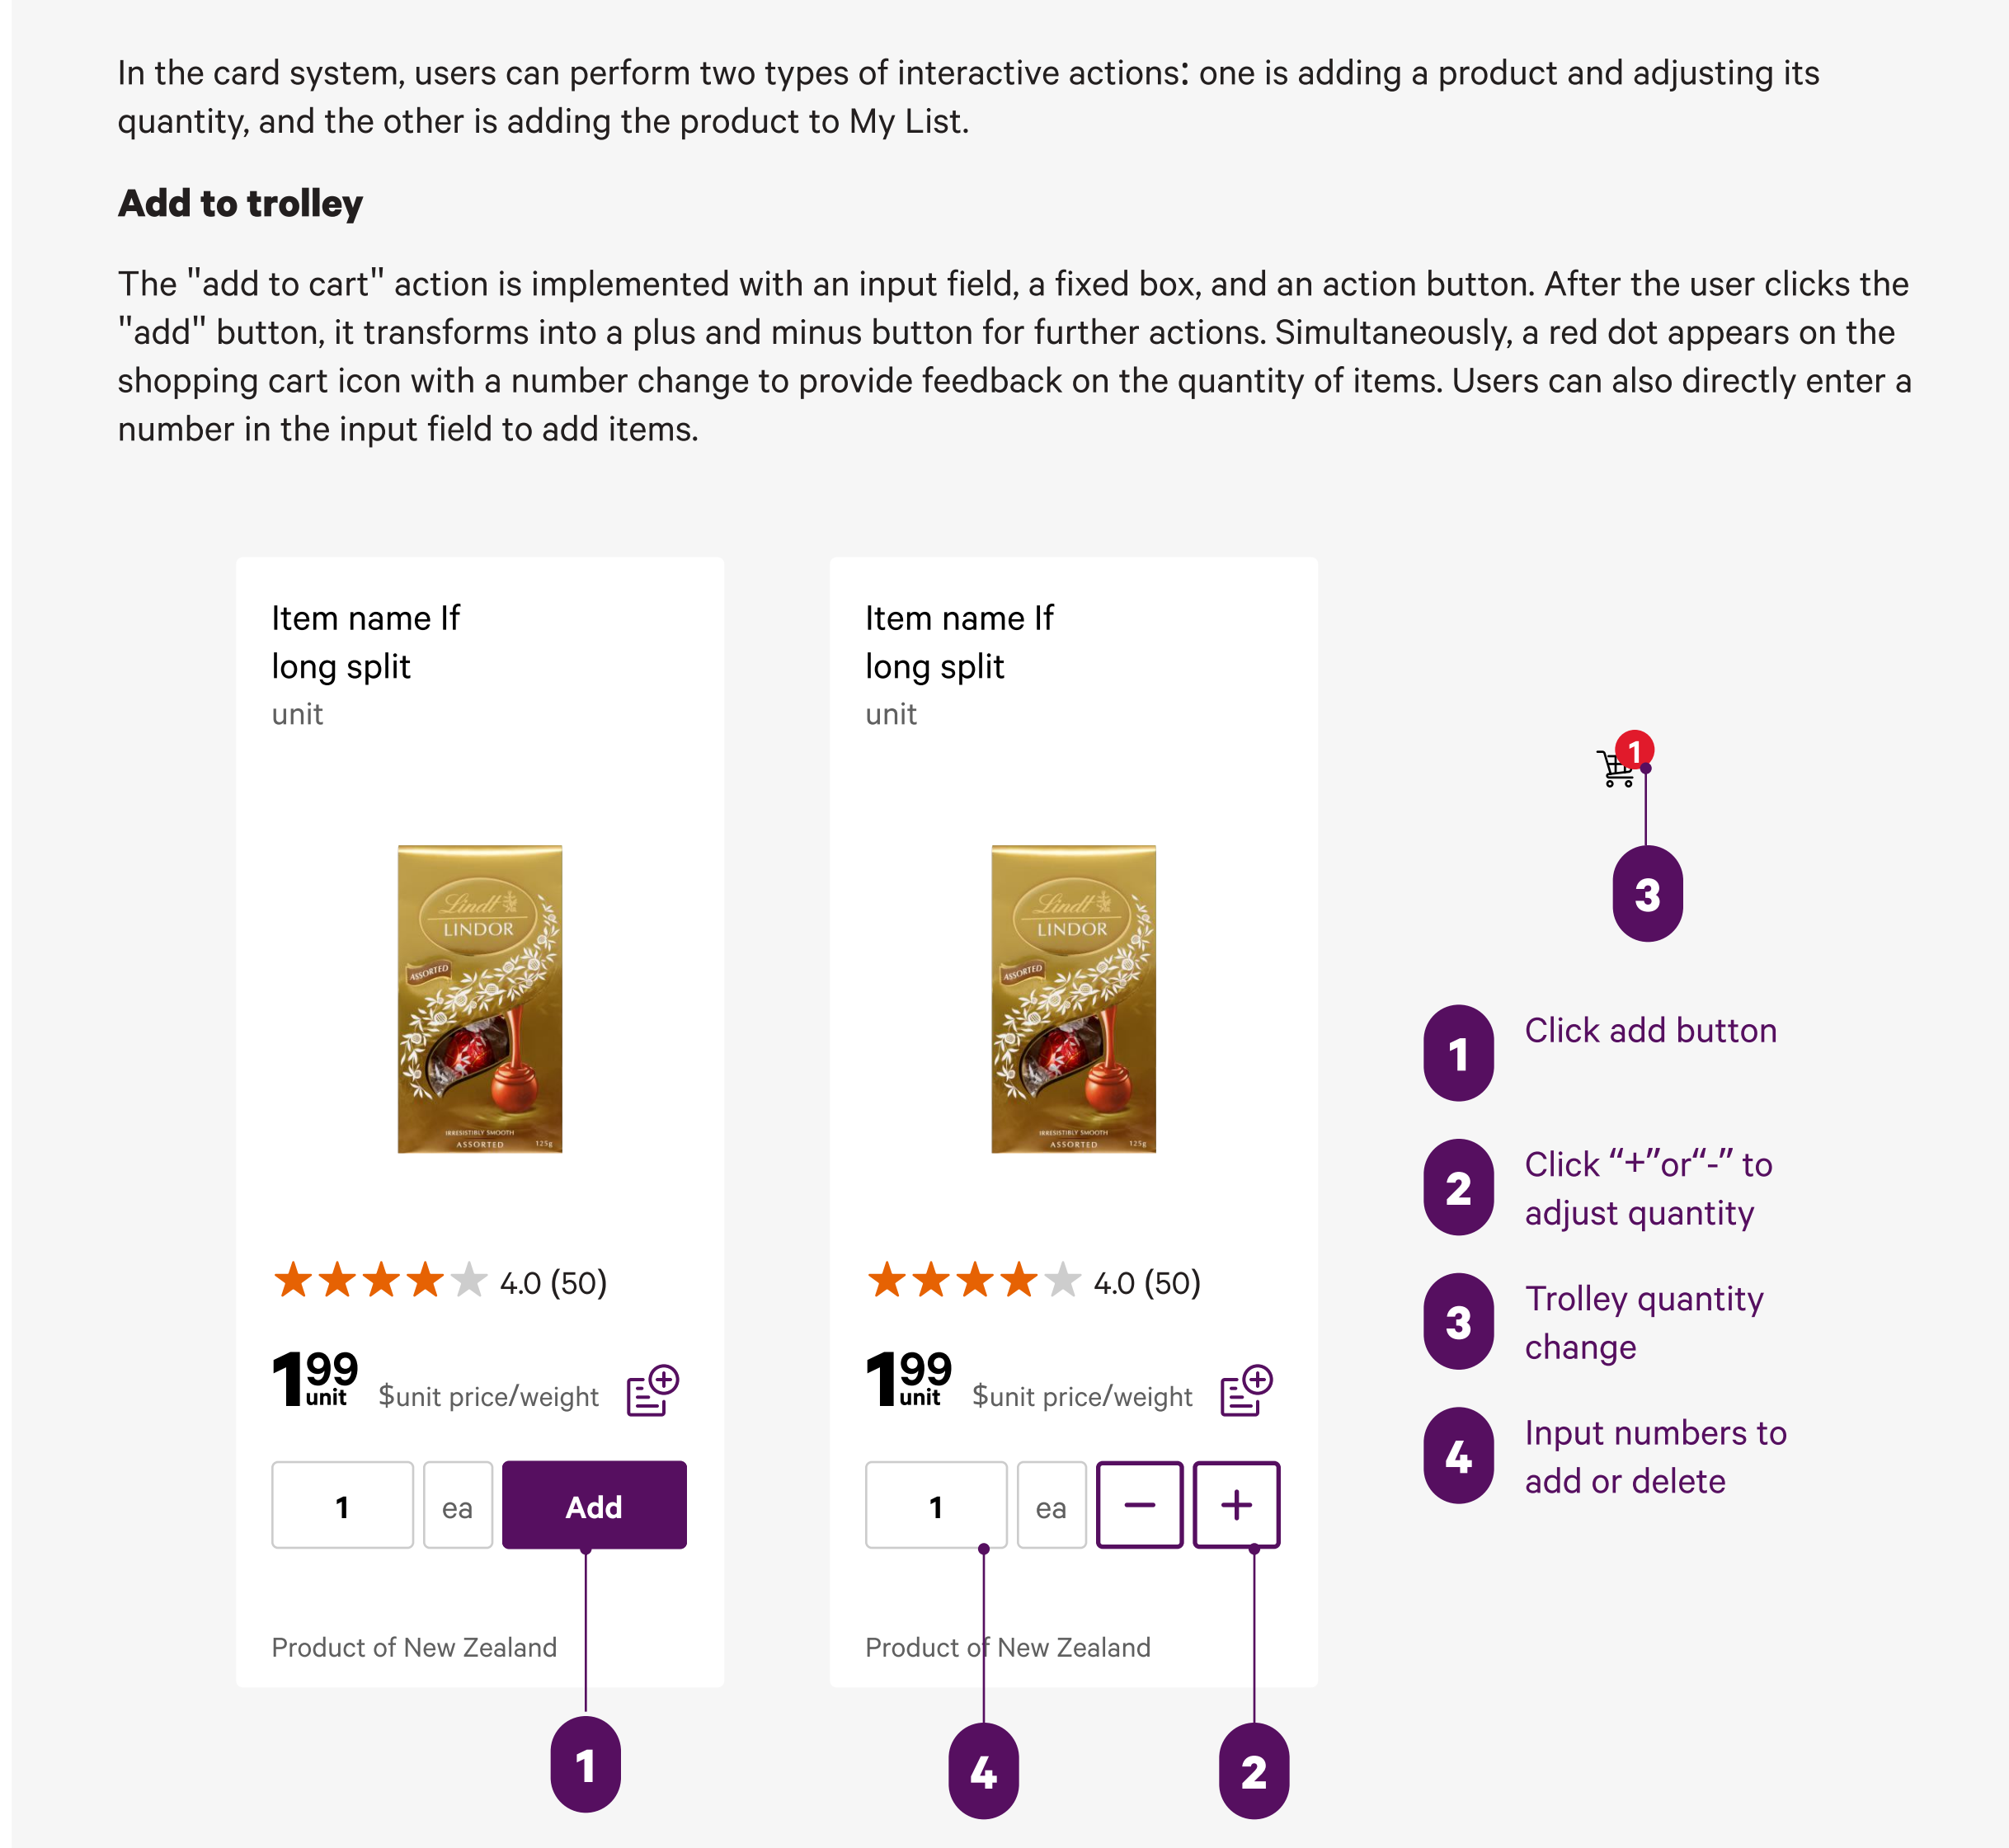

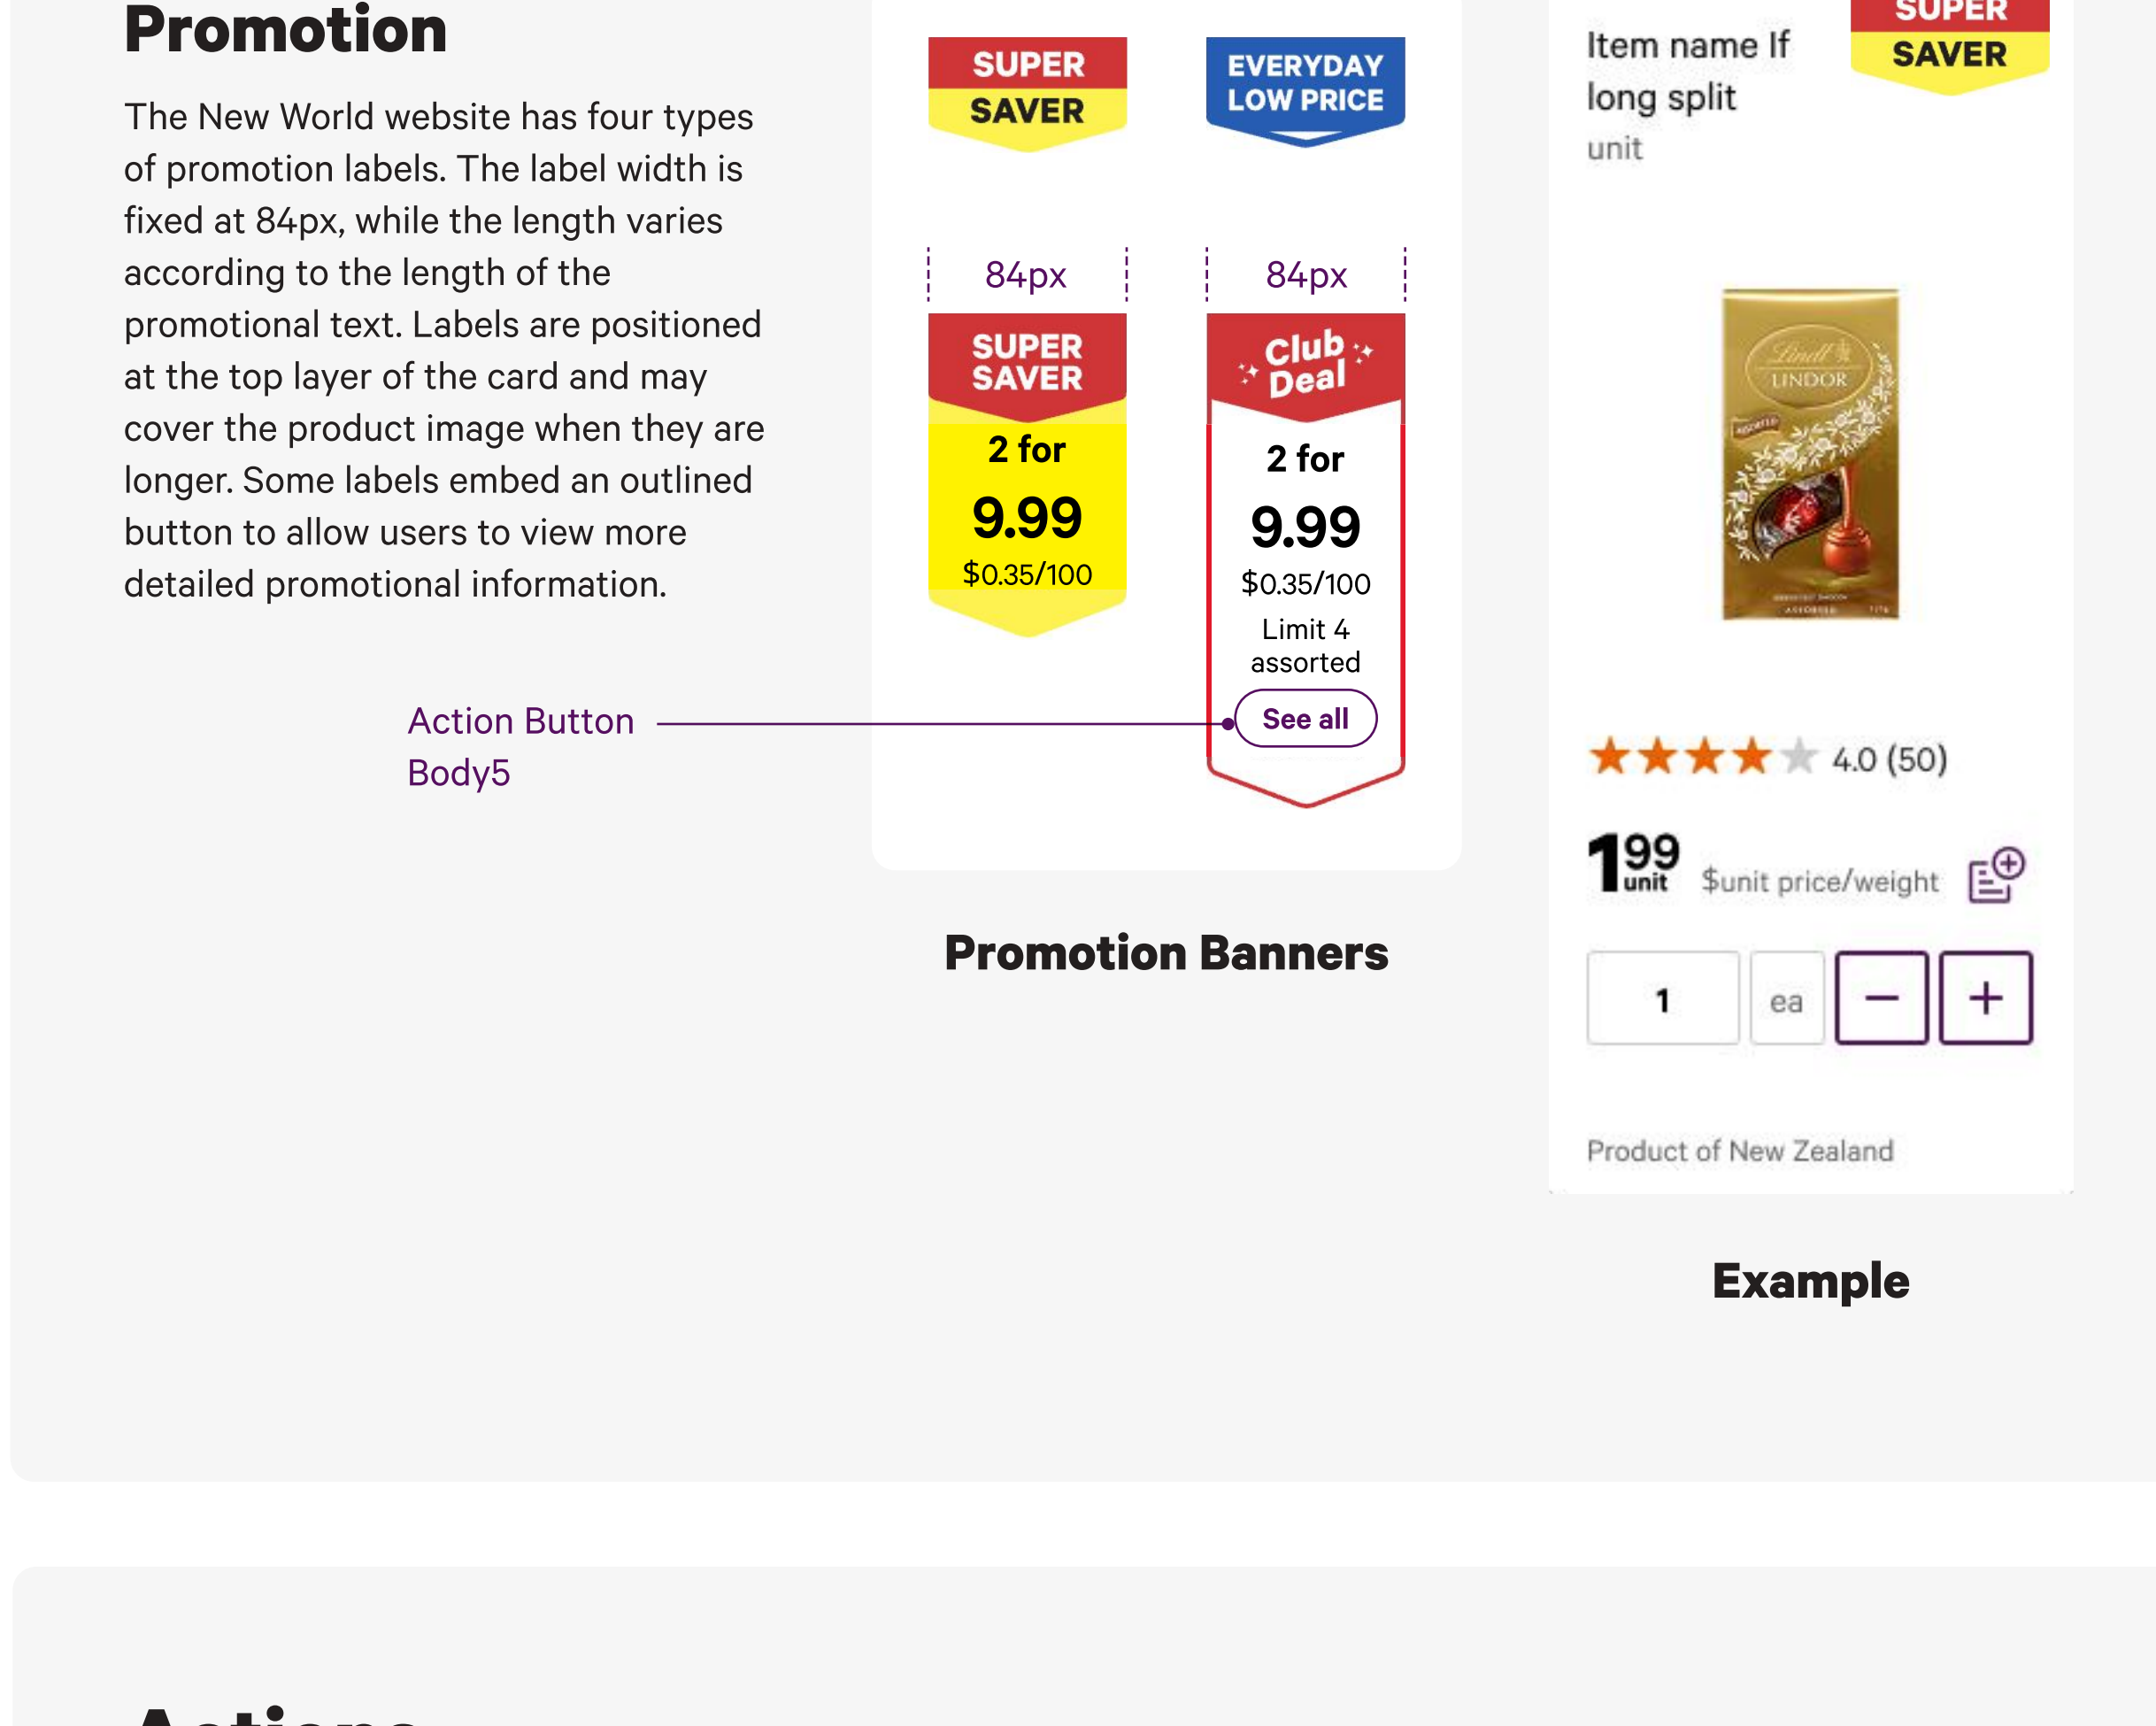

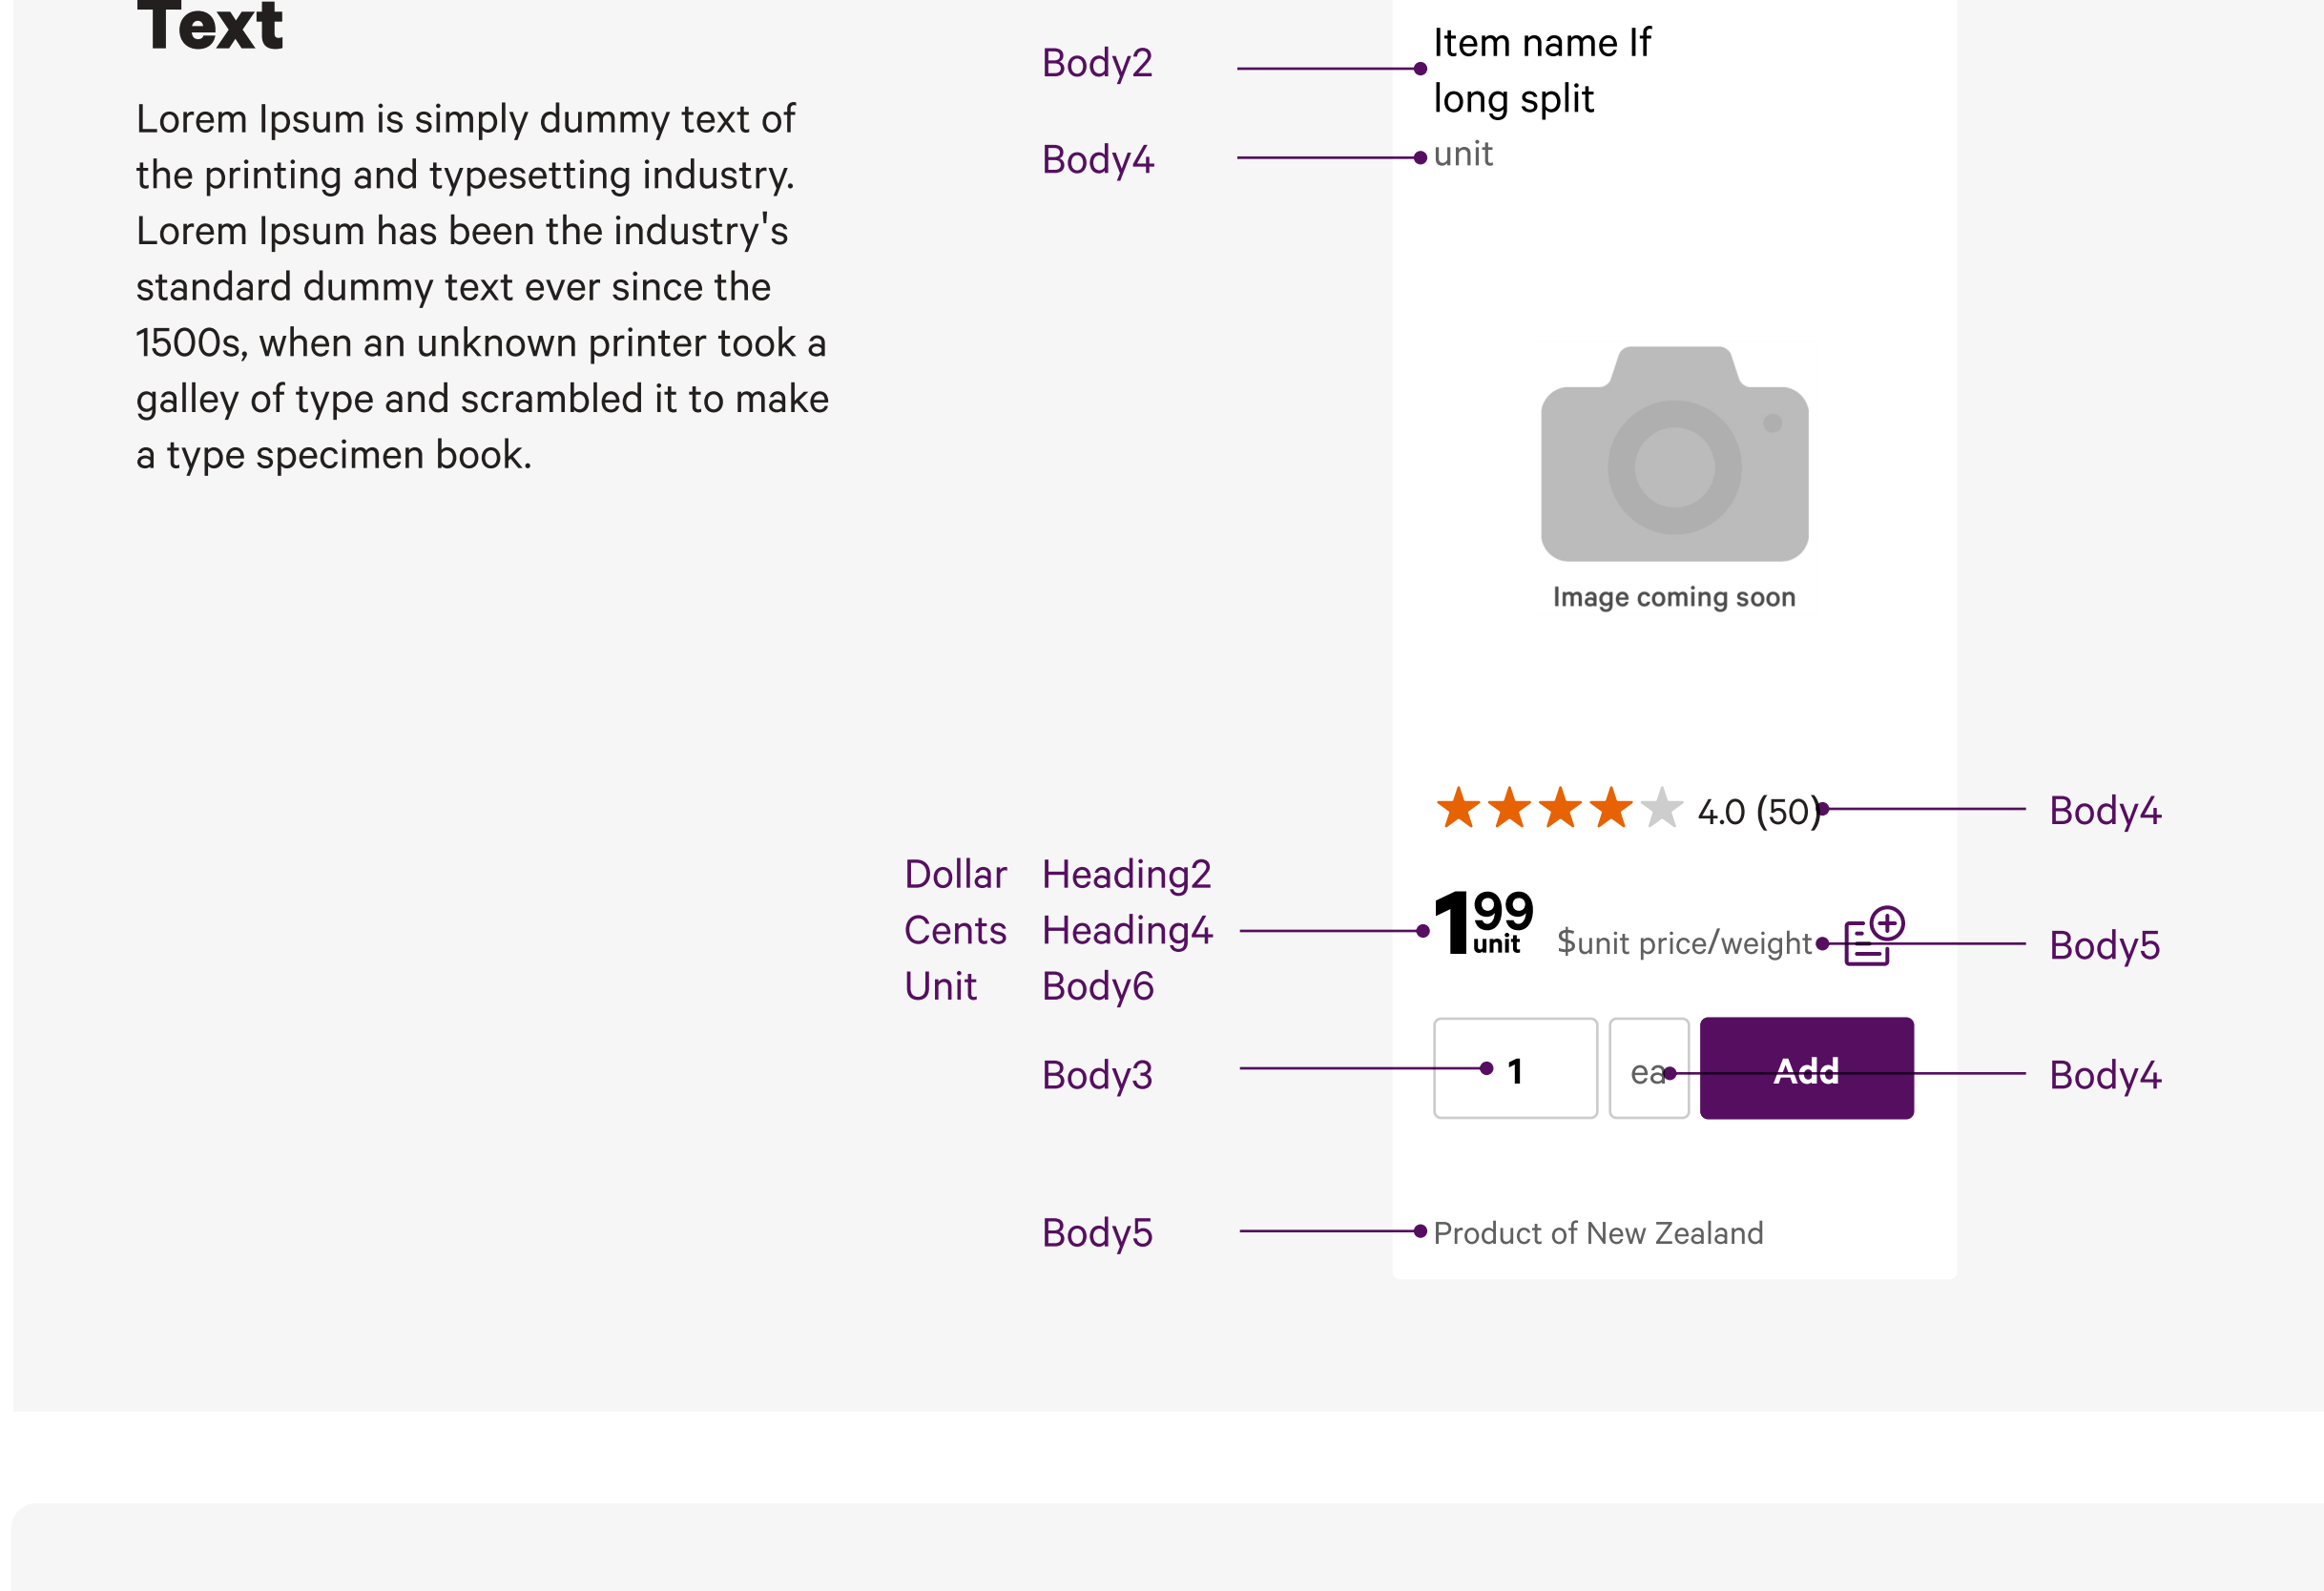

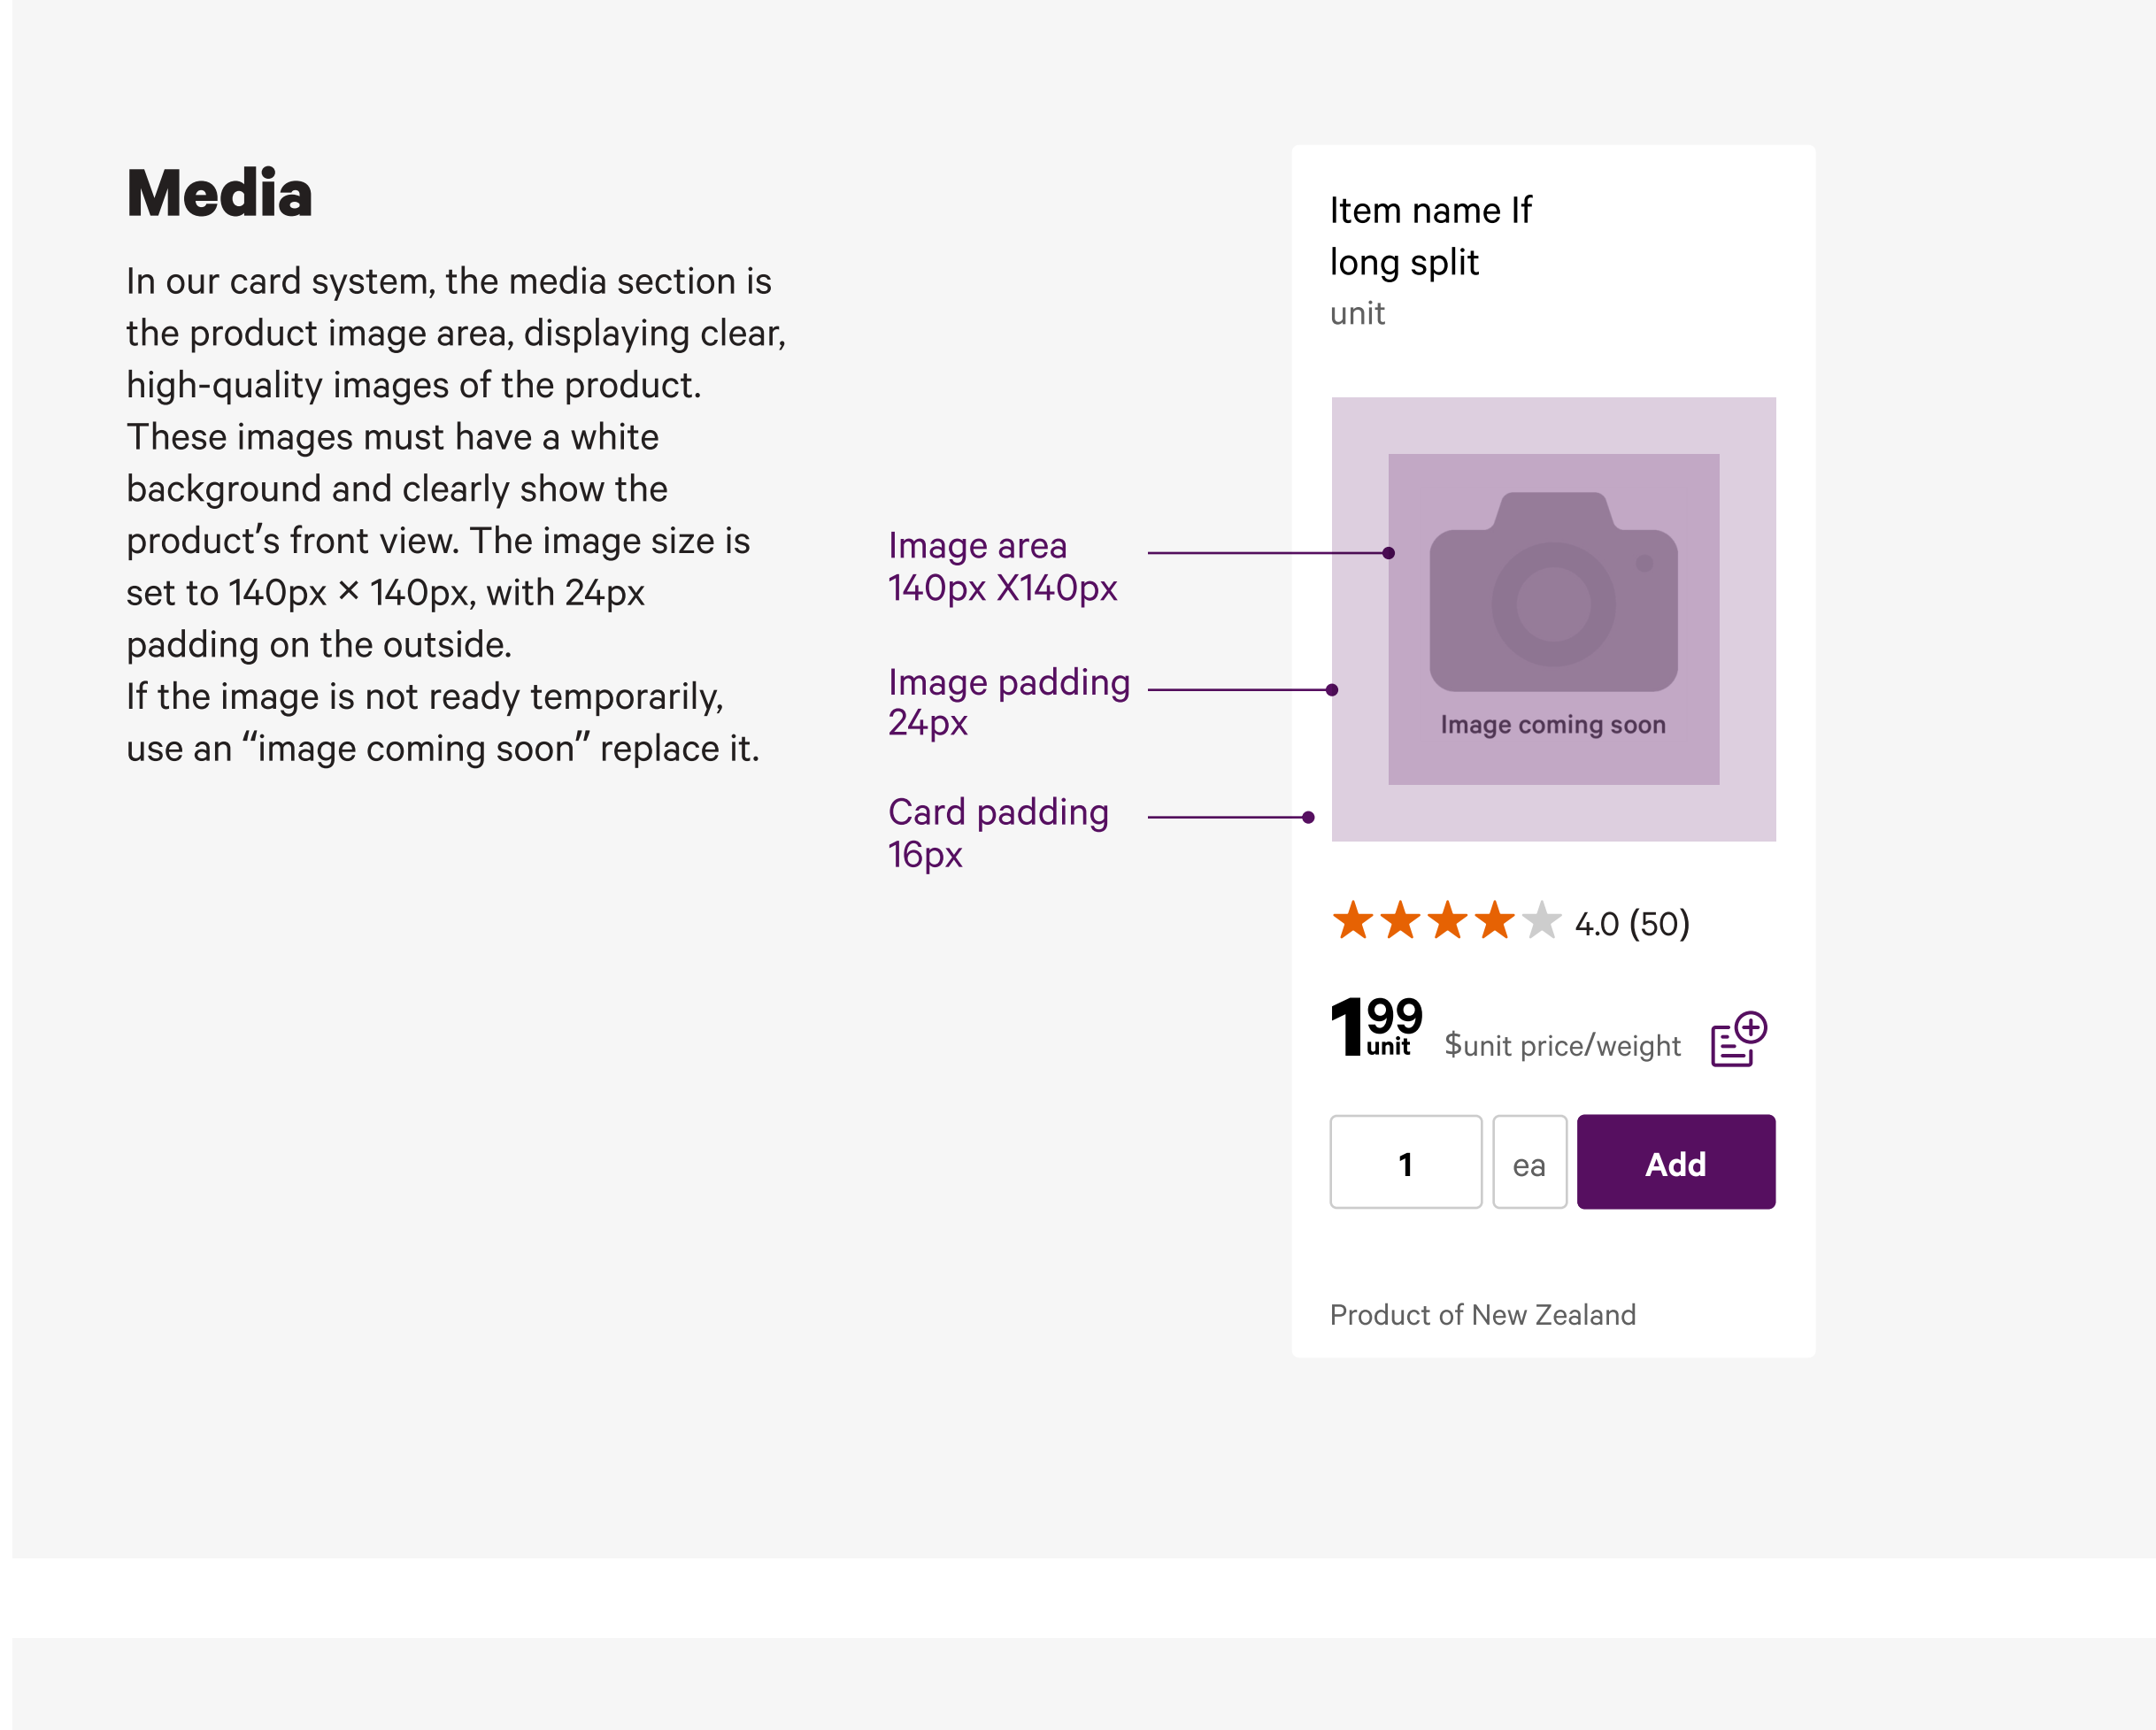

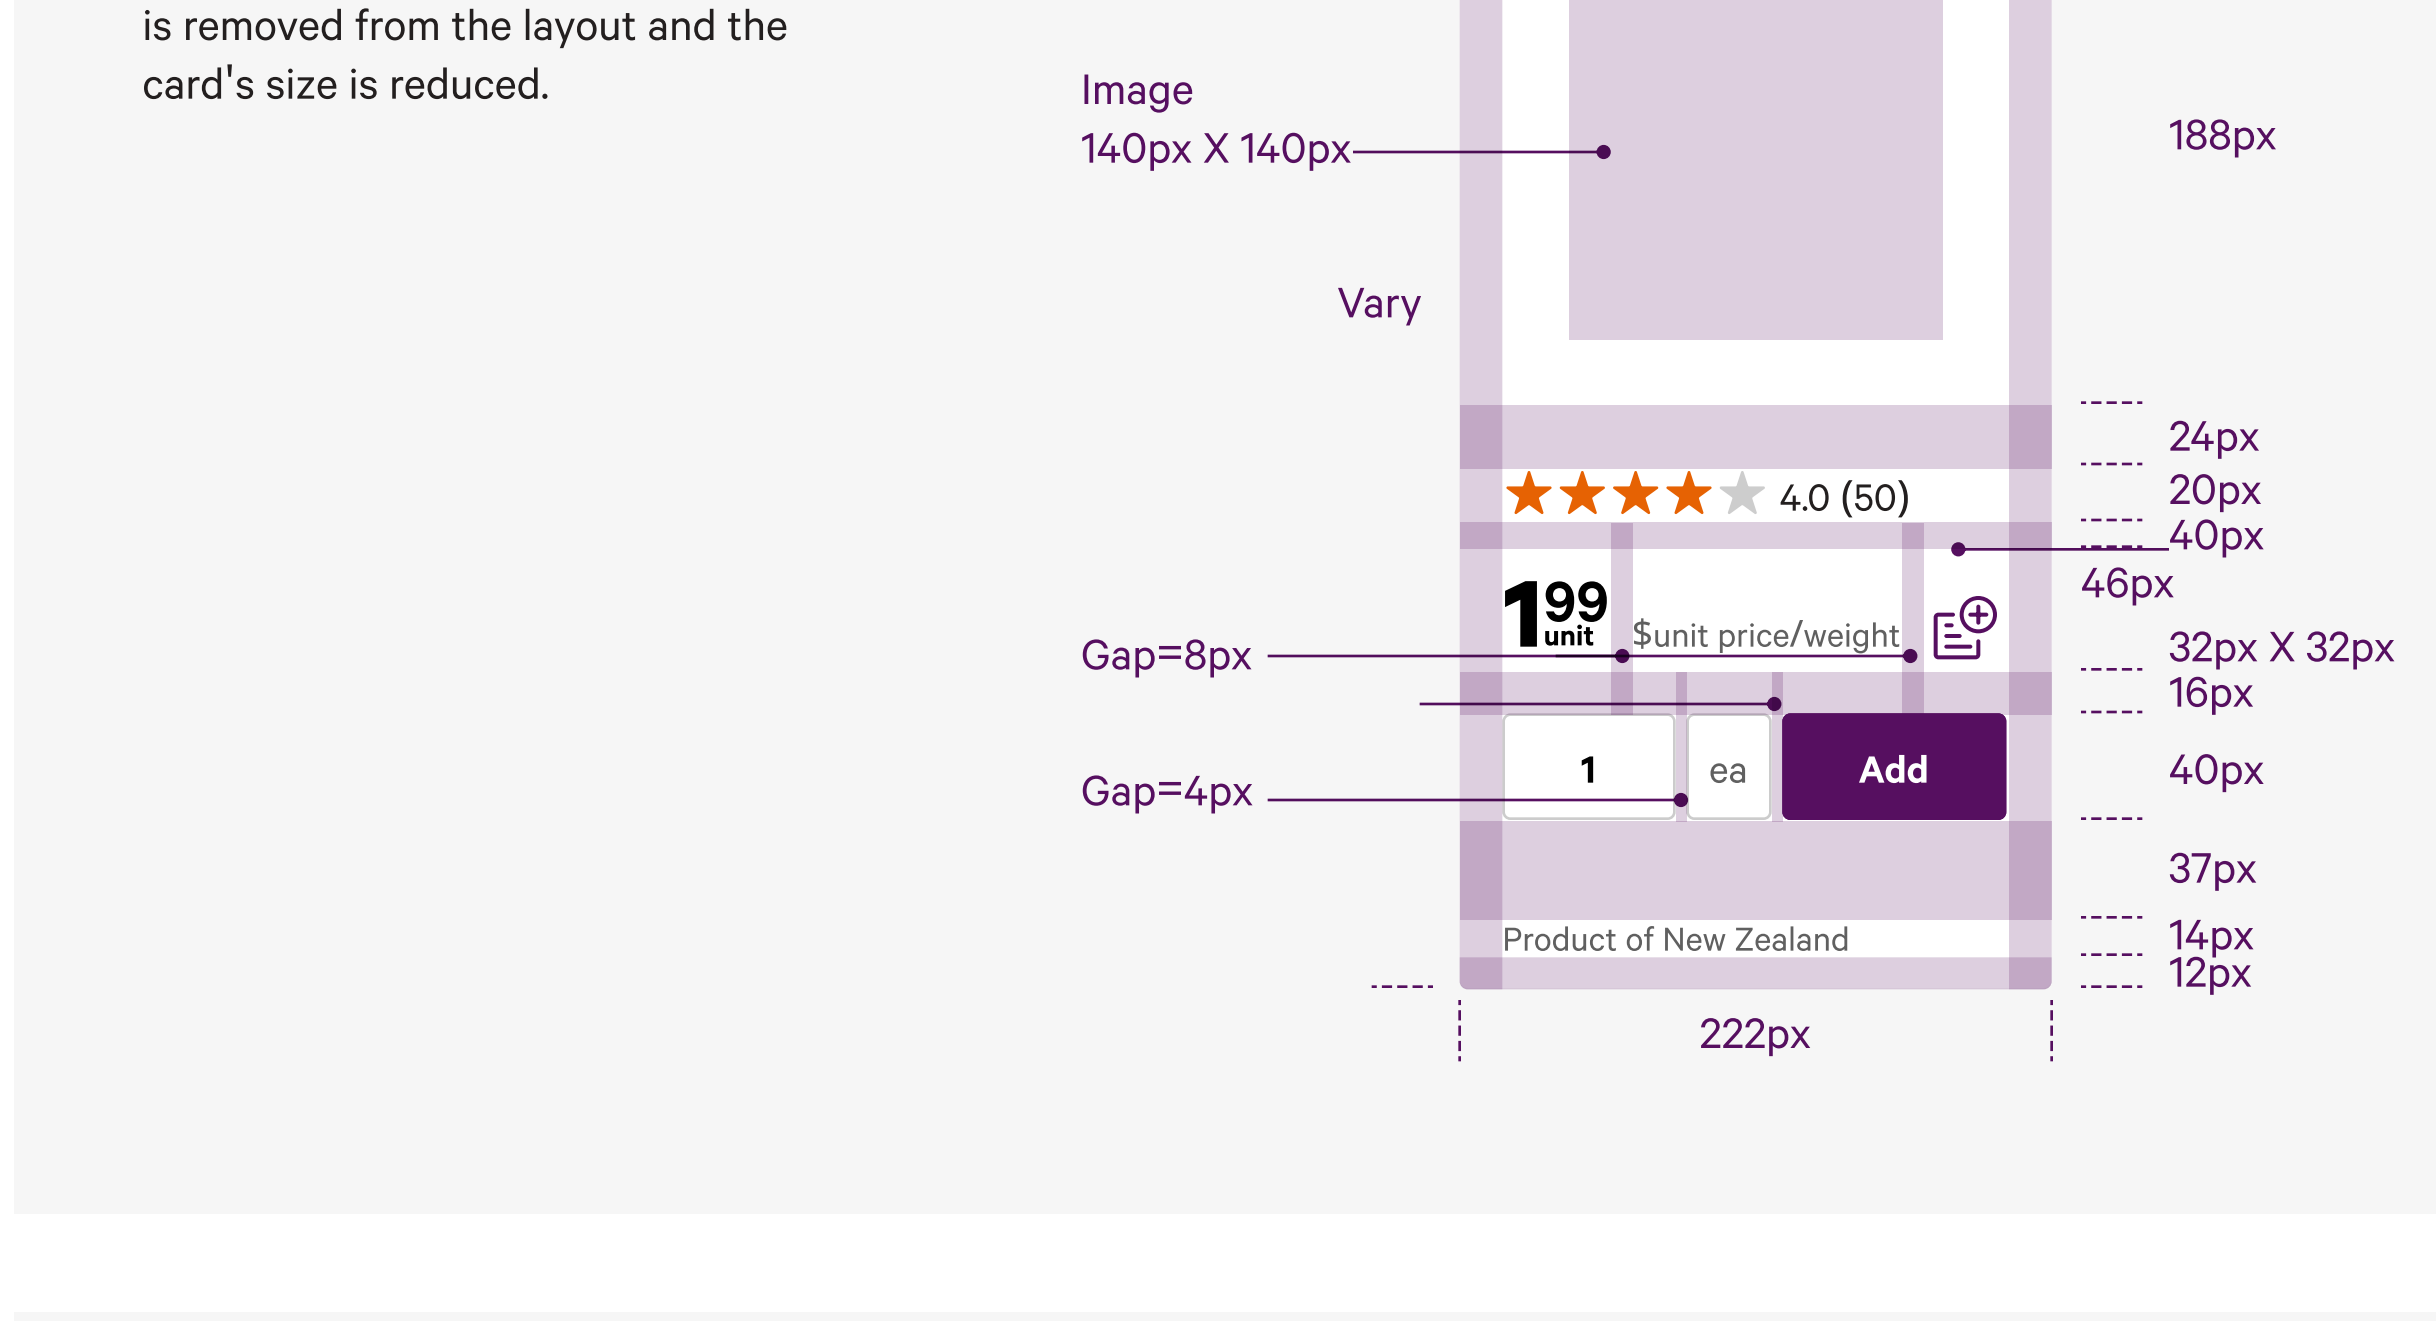

Our card system is an essential part of the shopping flow, allowing users to select products for purchase in a card format. The clarity and hierarchy of cards are crucial to both user interaction and visual presentation. Our card design system provides guidance through the deconstruction of cards, the elements that make up their components, and the way cards are arranged within the interface.

Anatomy

A card component is made up of various elements that are clearly and logically arranged within a container. It provides users with sufficient information for understanding and interaction. Below is an introduction to the specific elements of a card component.

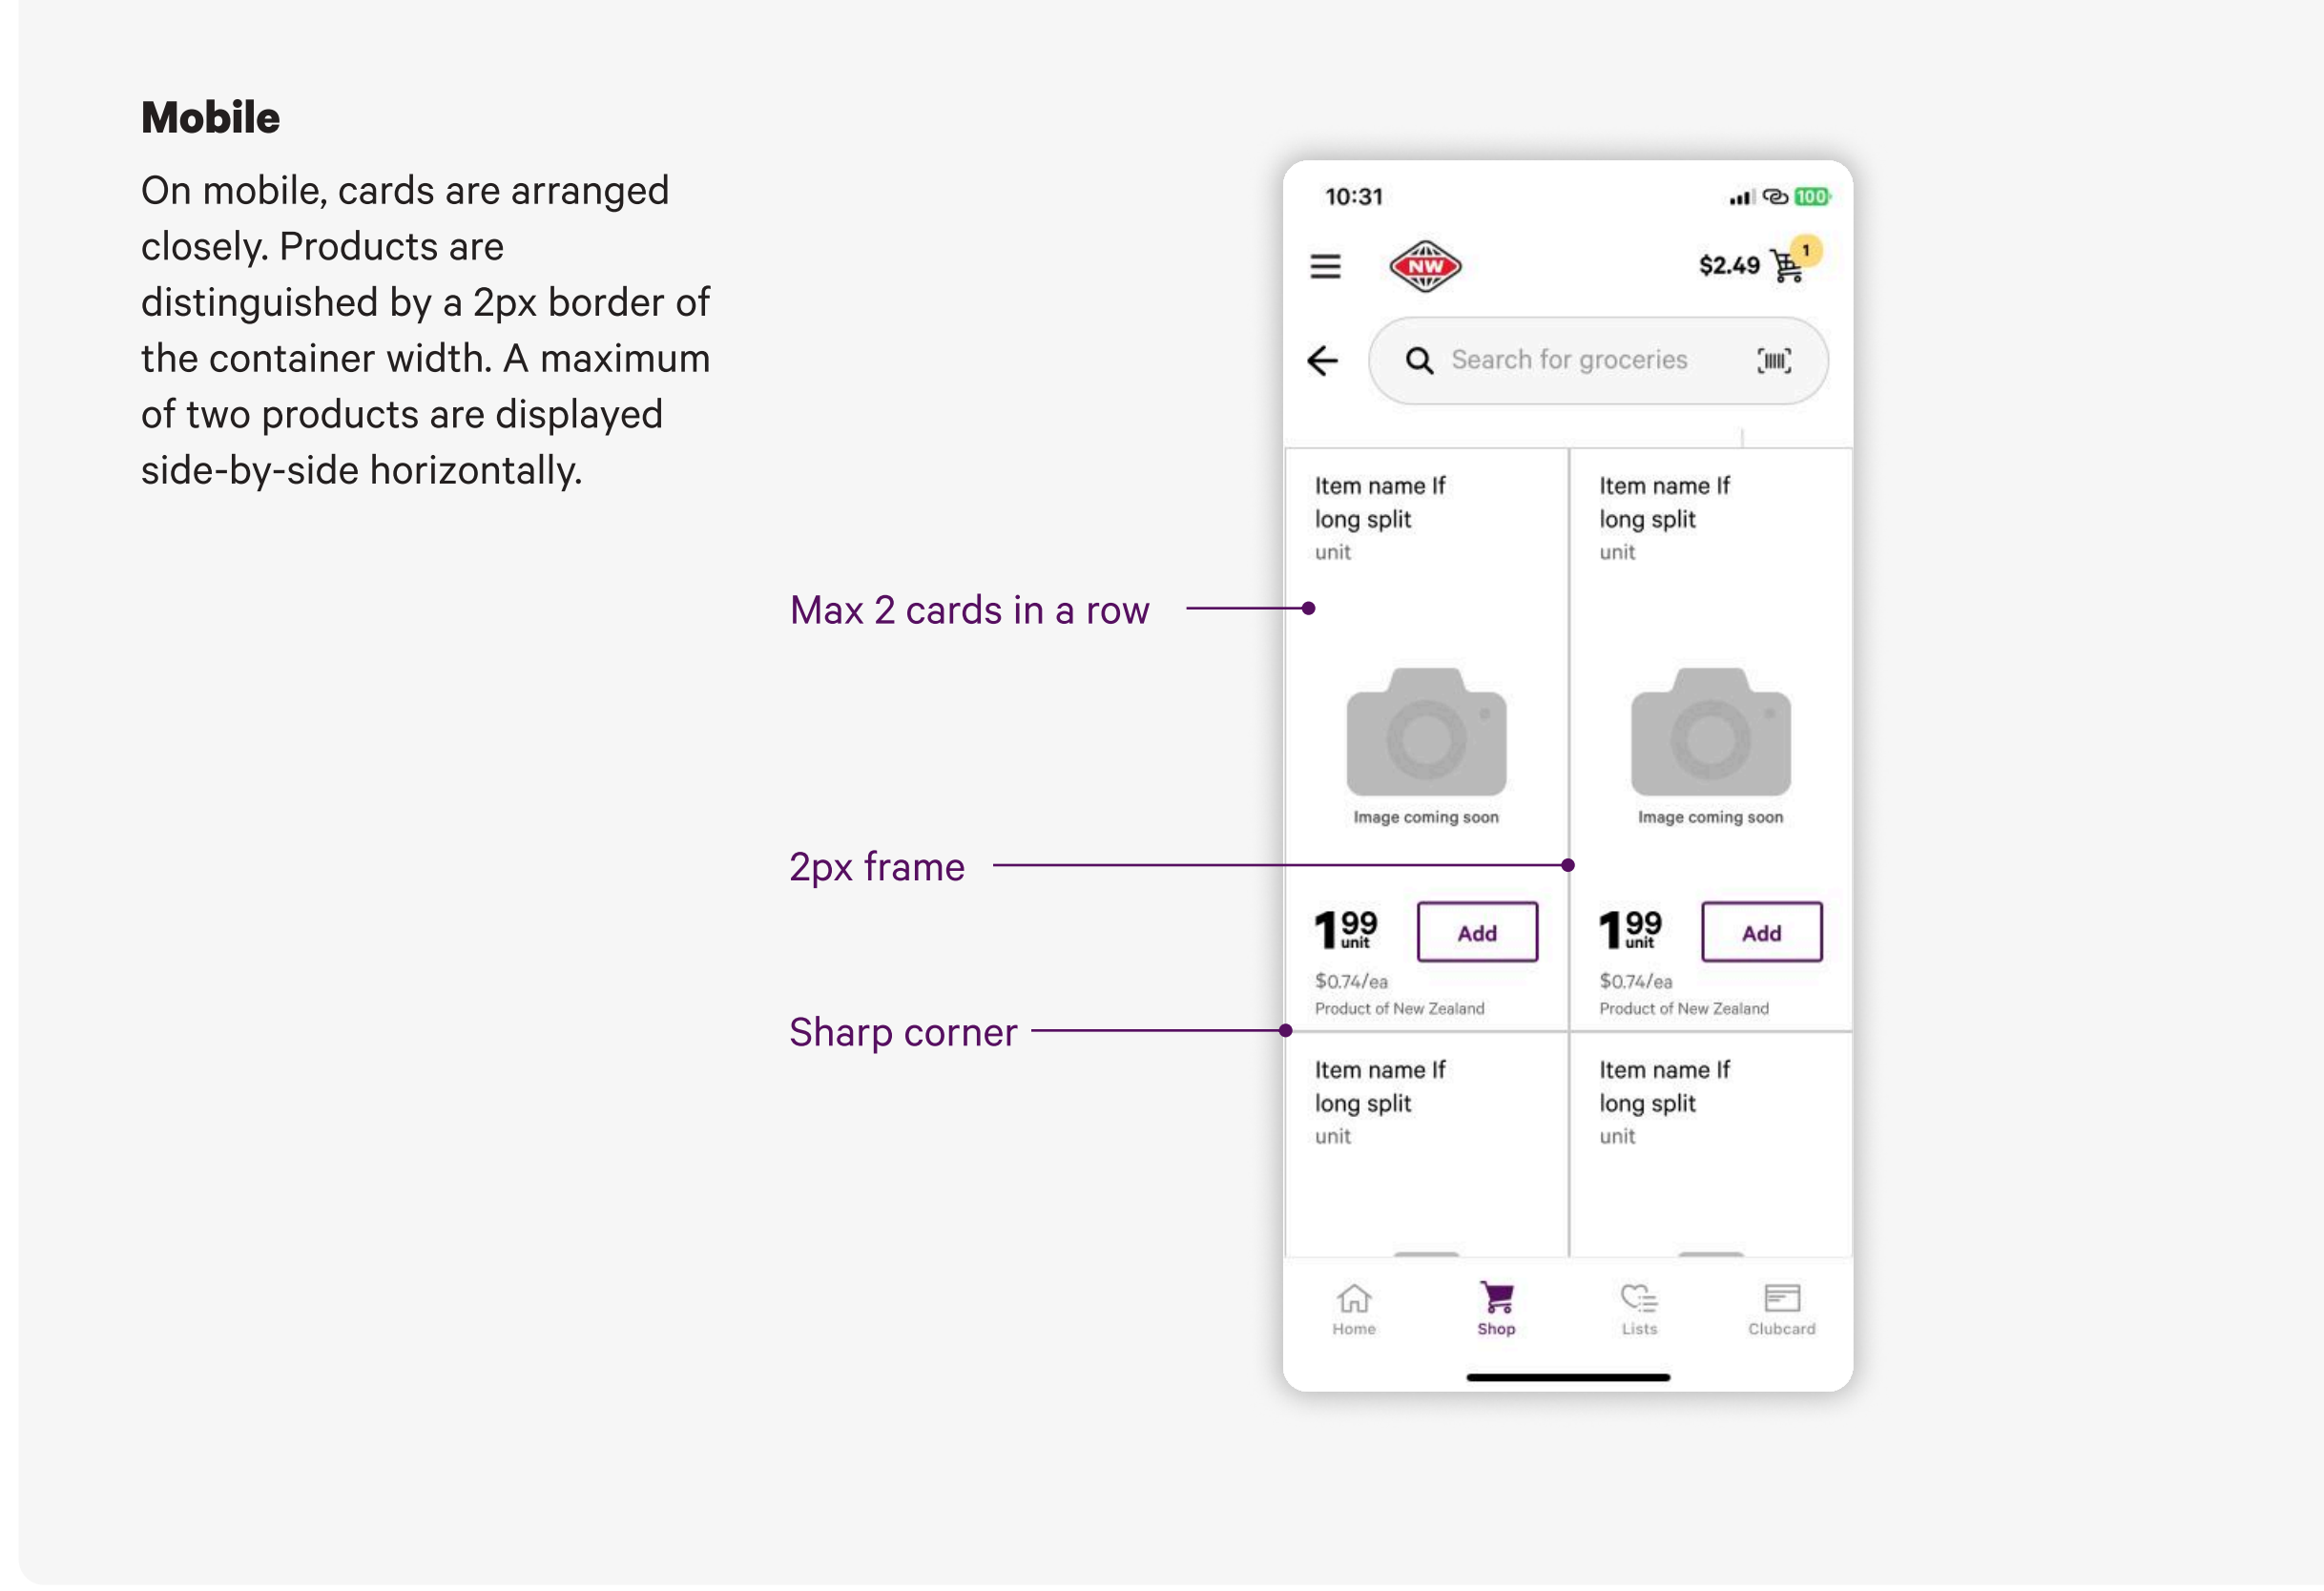

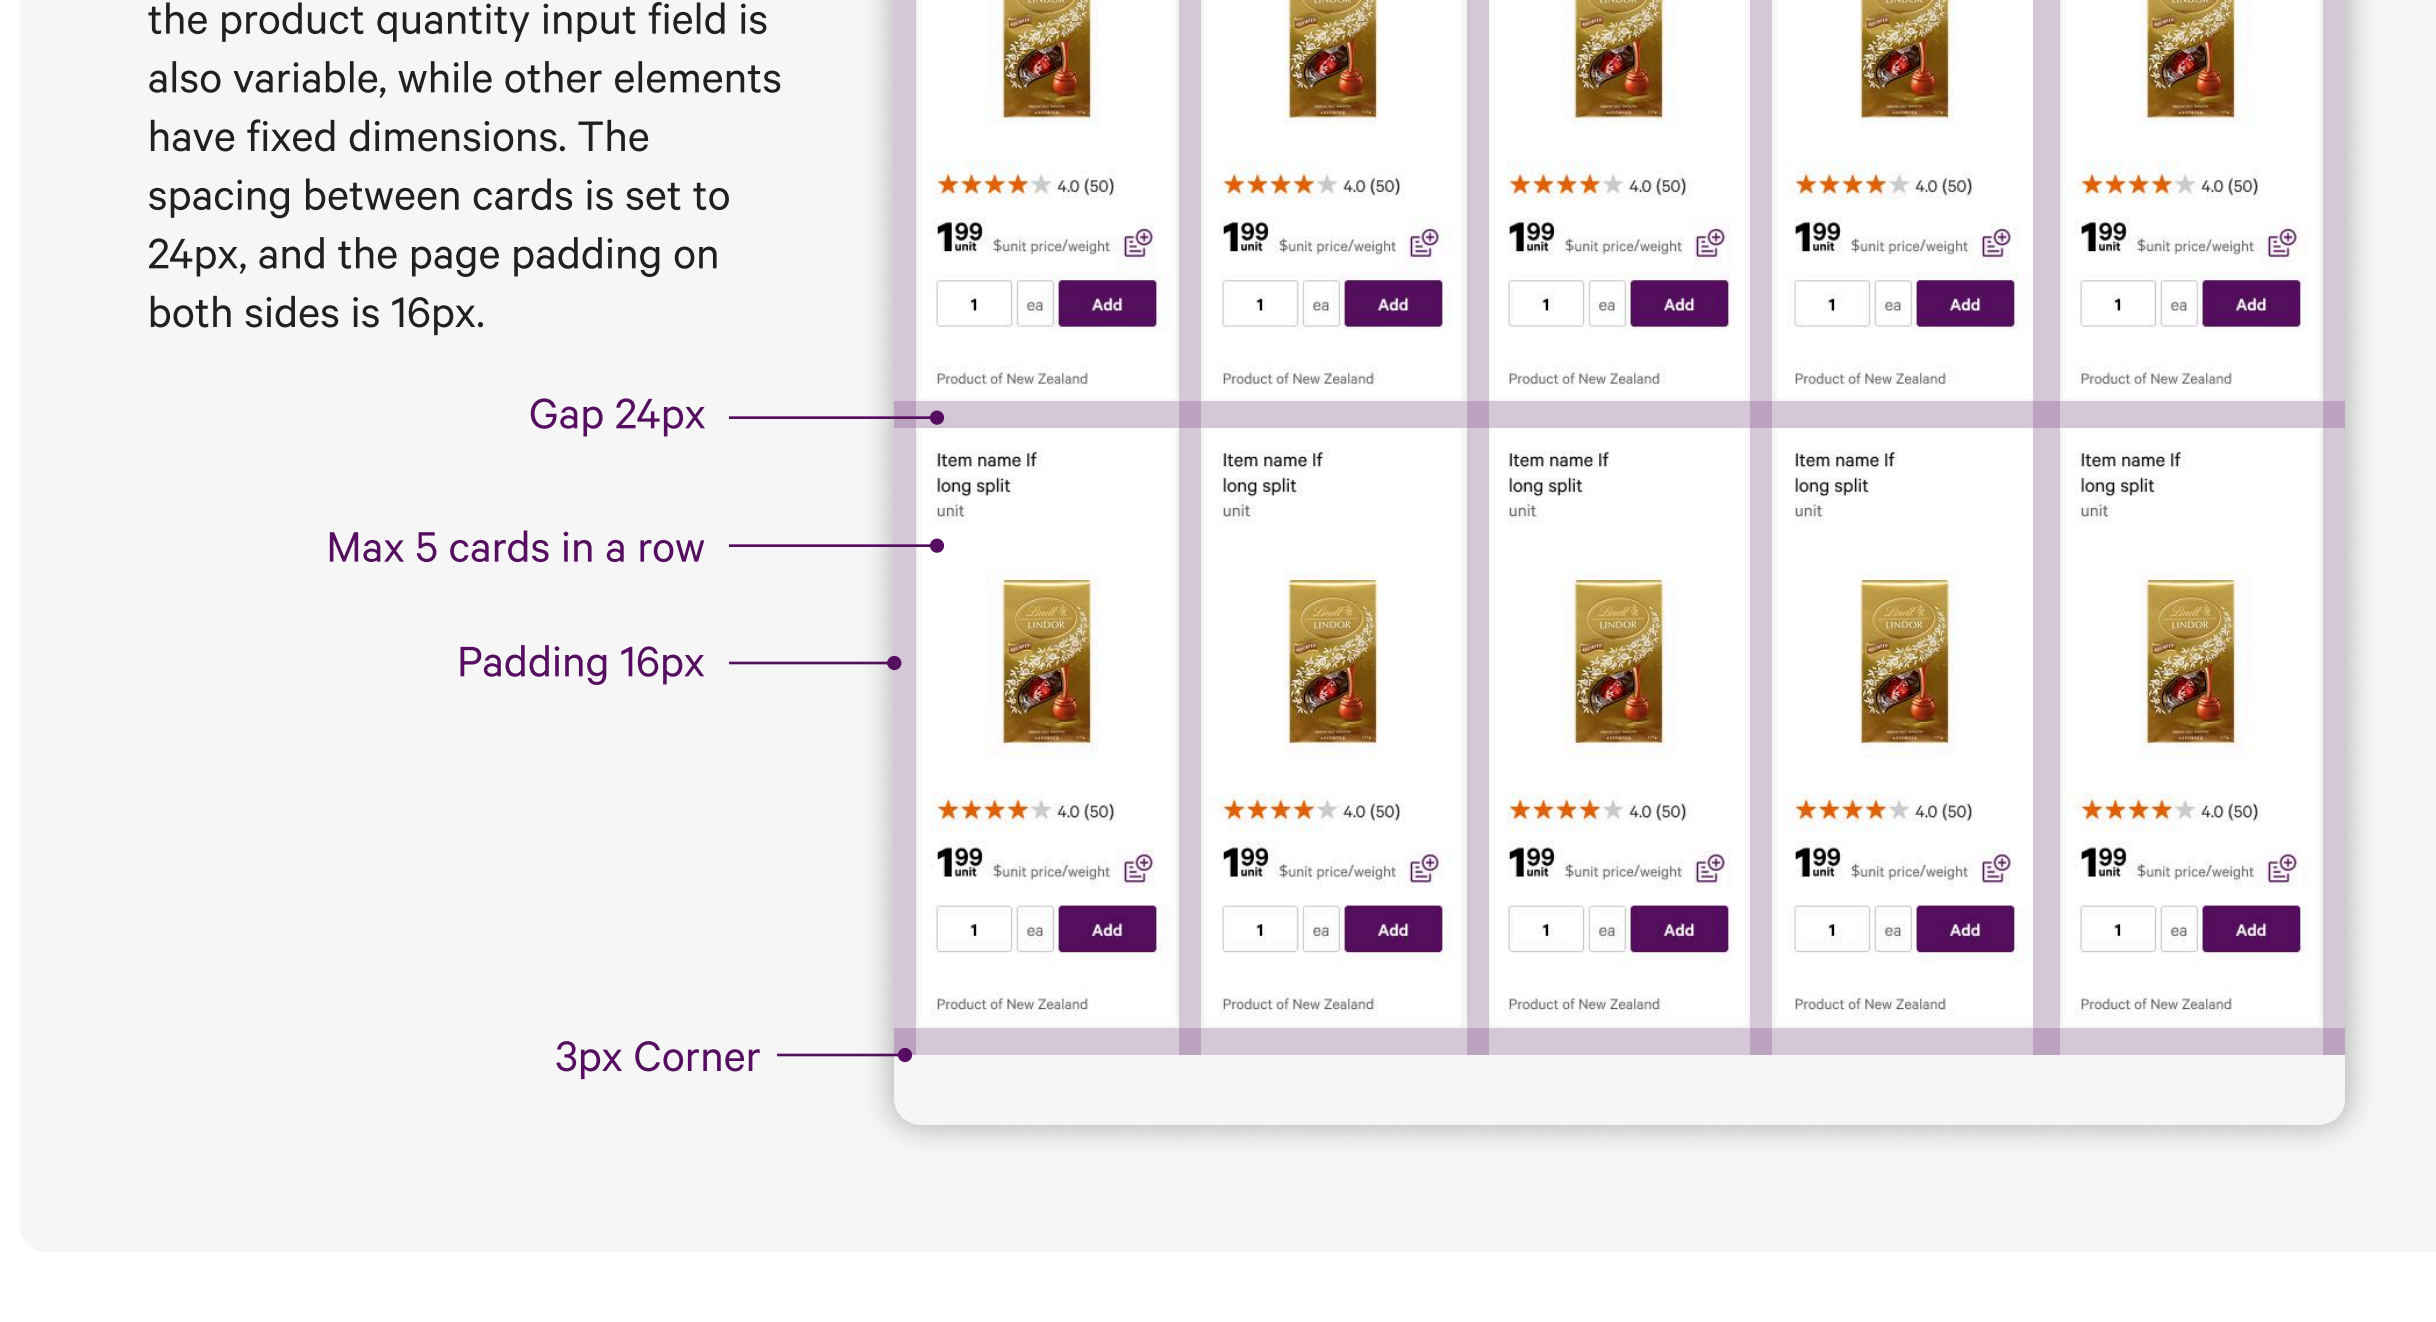

Content Blocks

Card in a Collection

Grid

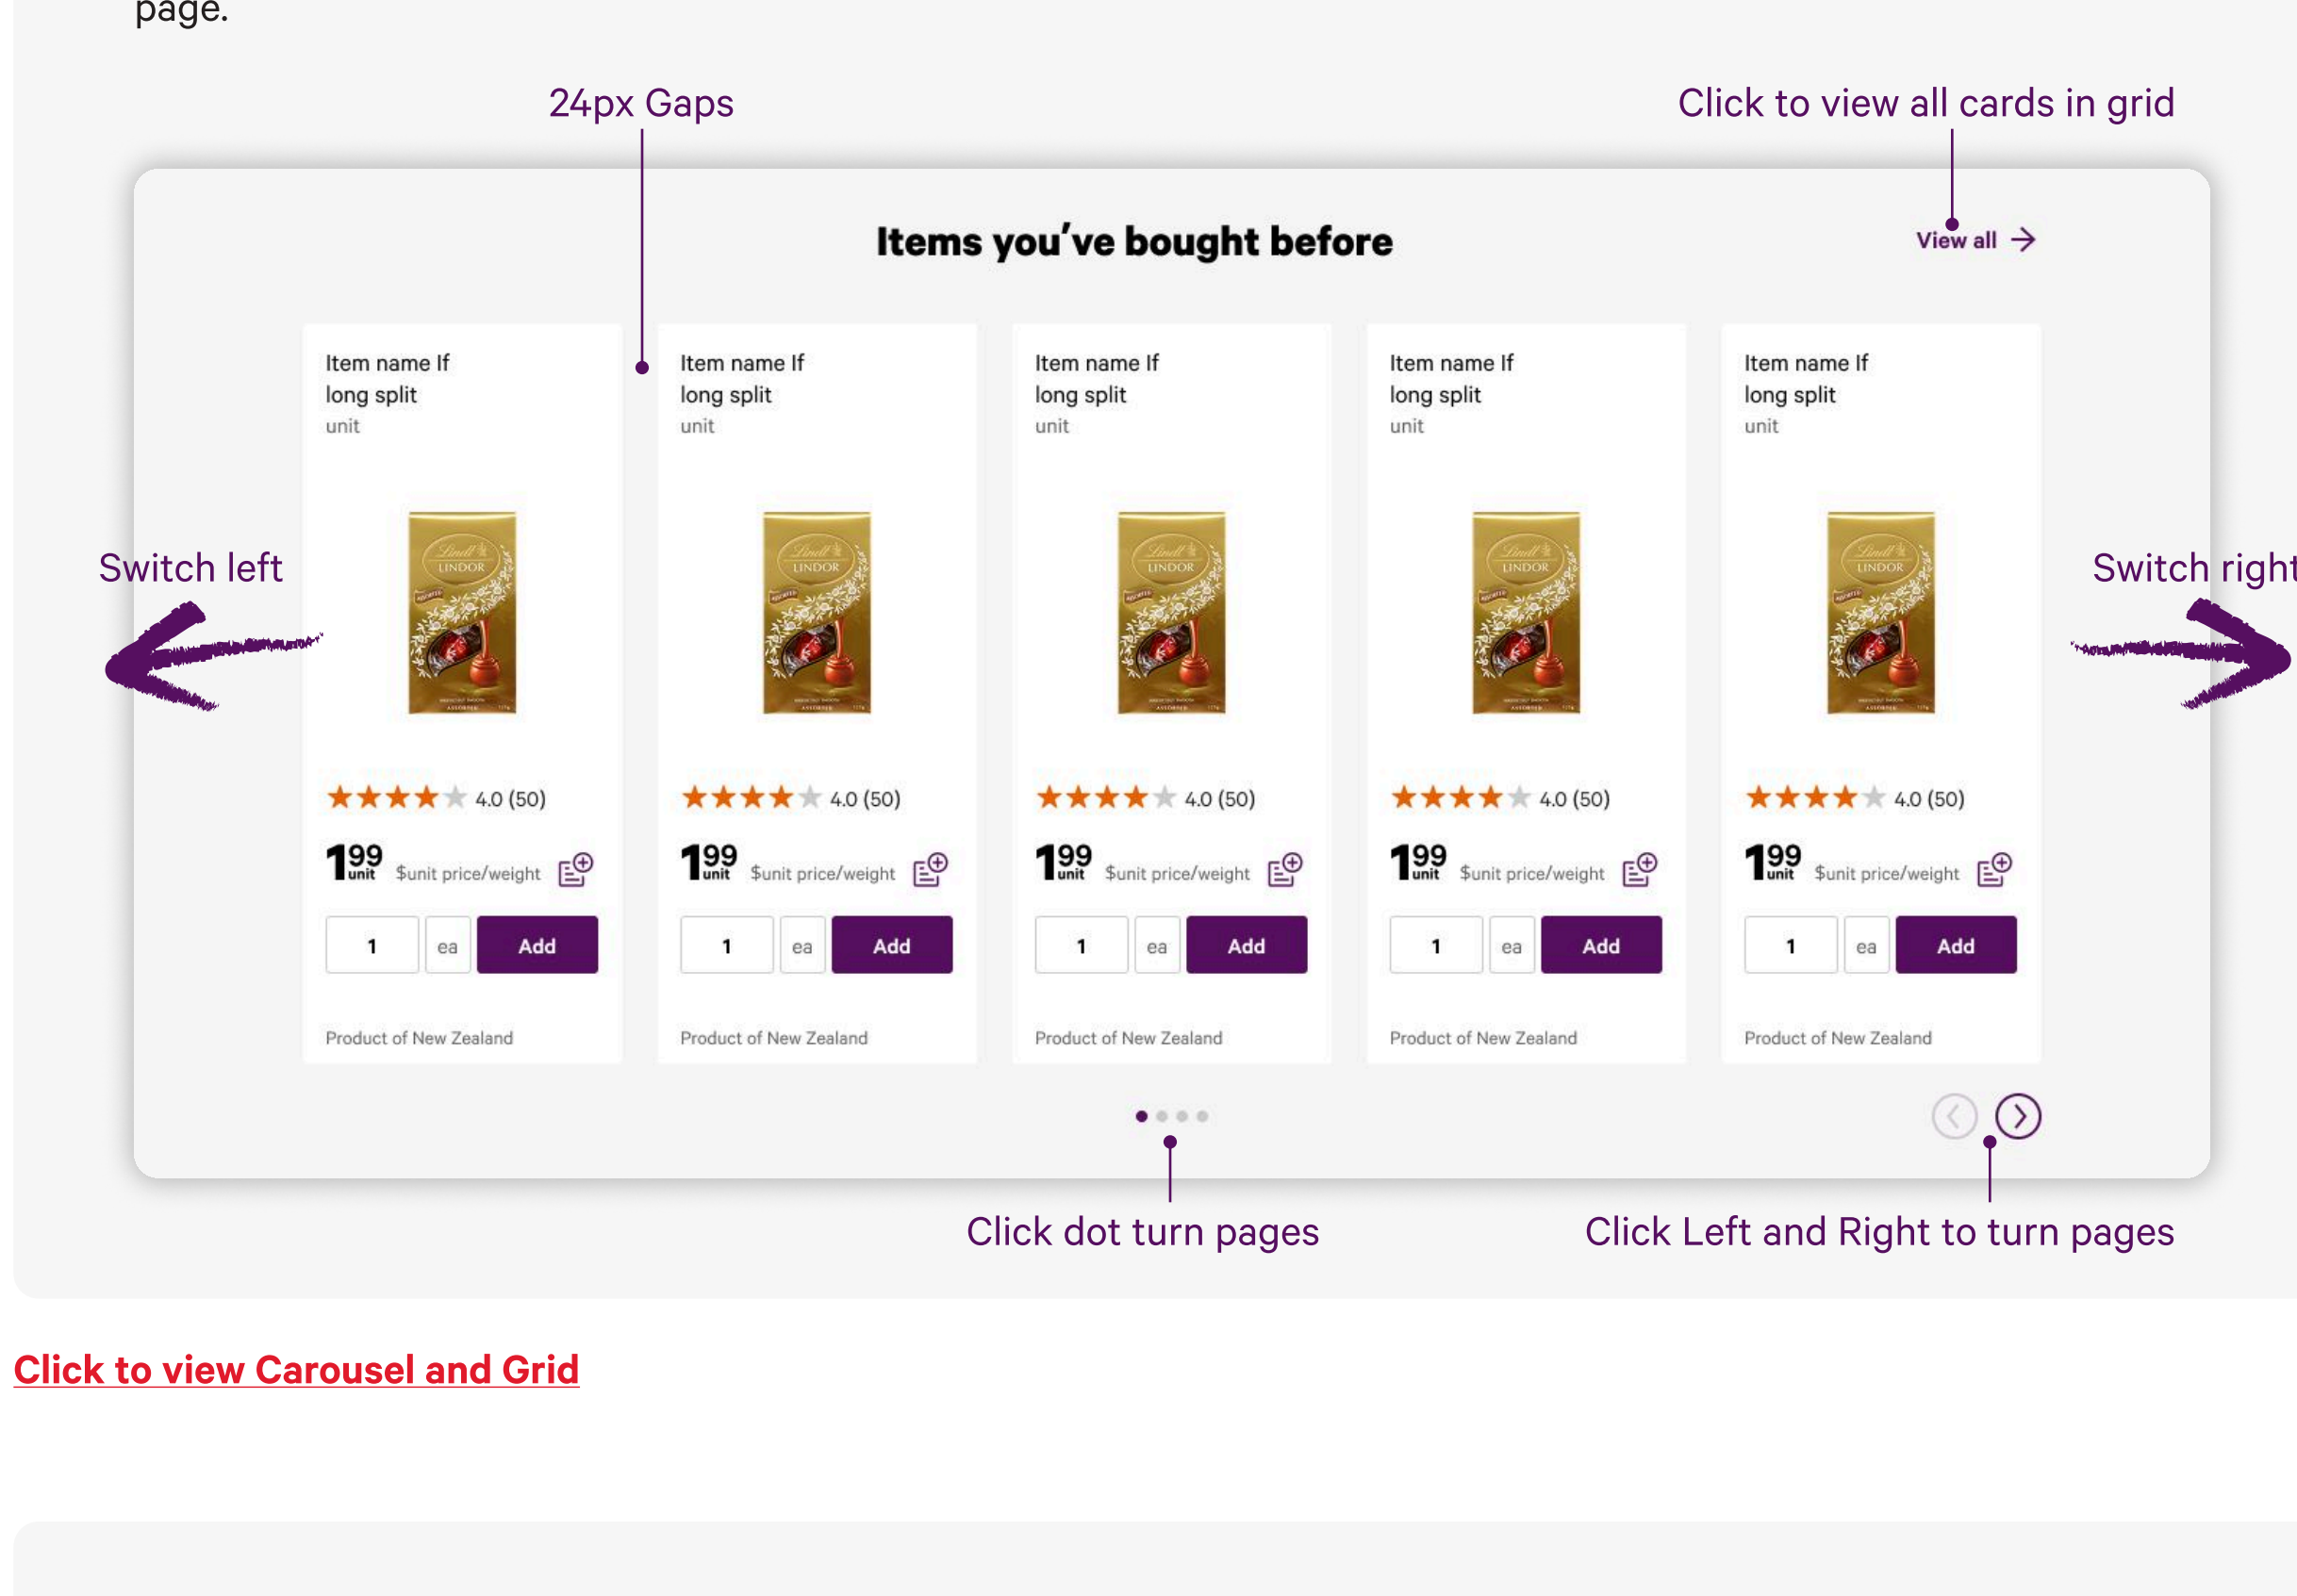

The New World online platform has countless products to display. On various interfaces, the card layouts need to have appropriate dimensions to ensure that products are presented clearly and are distinguishable.

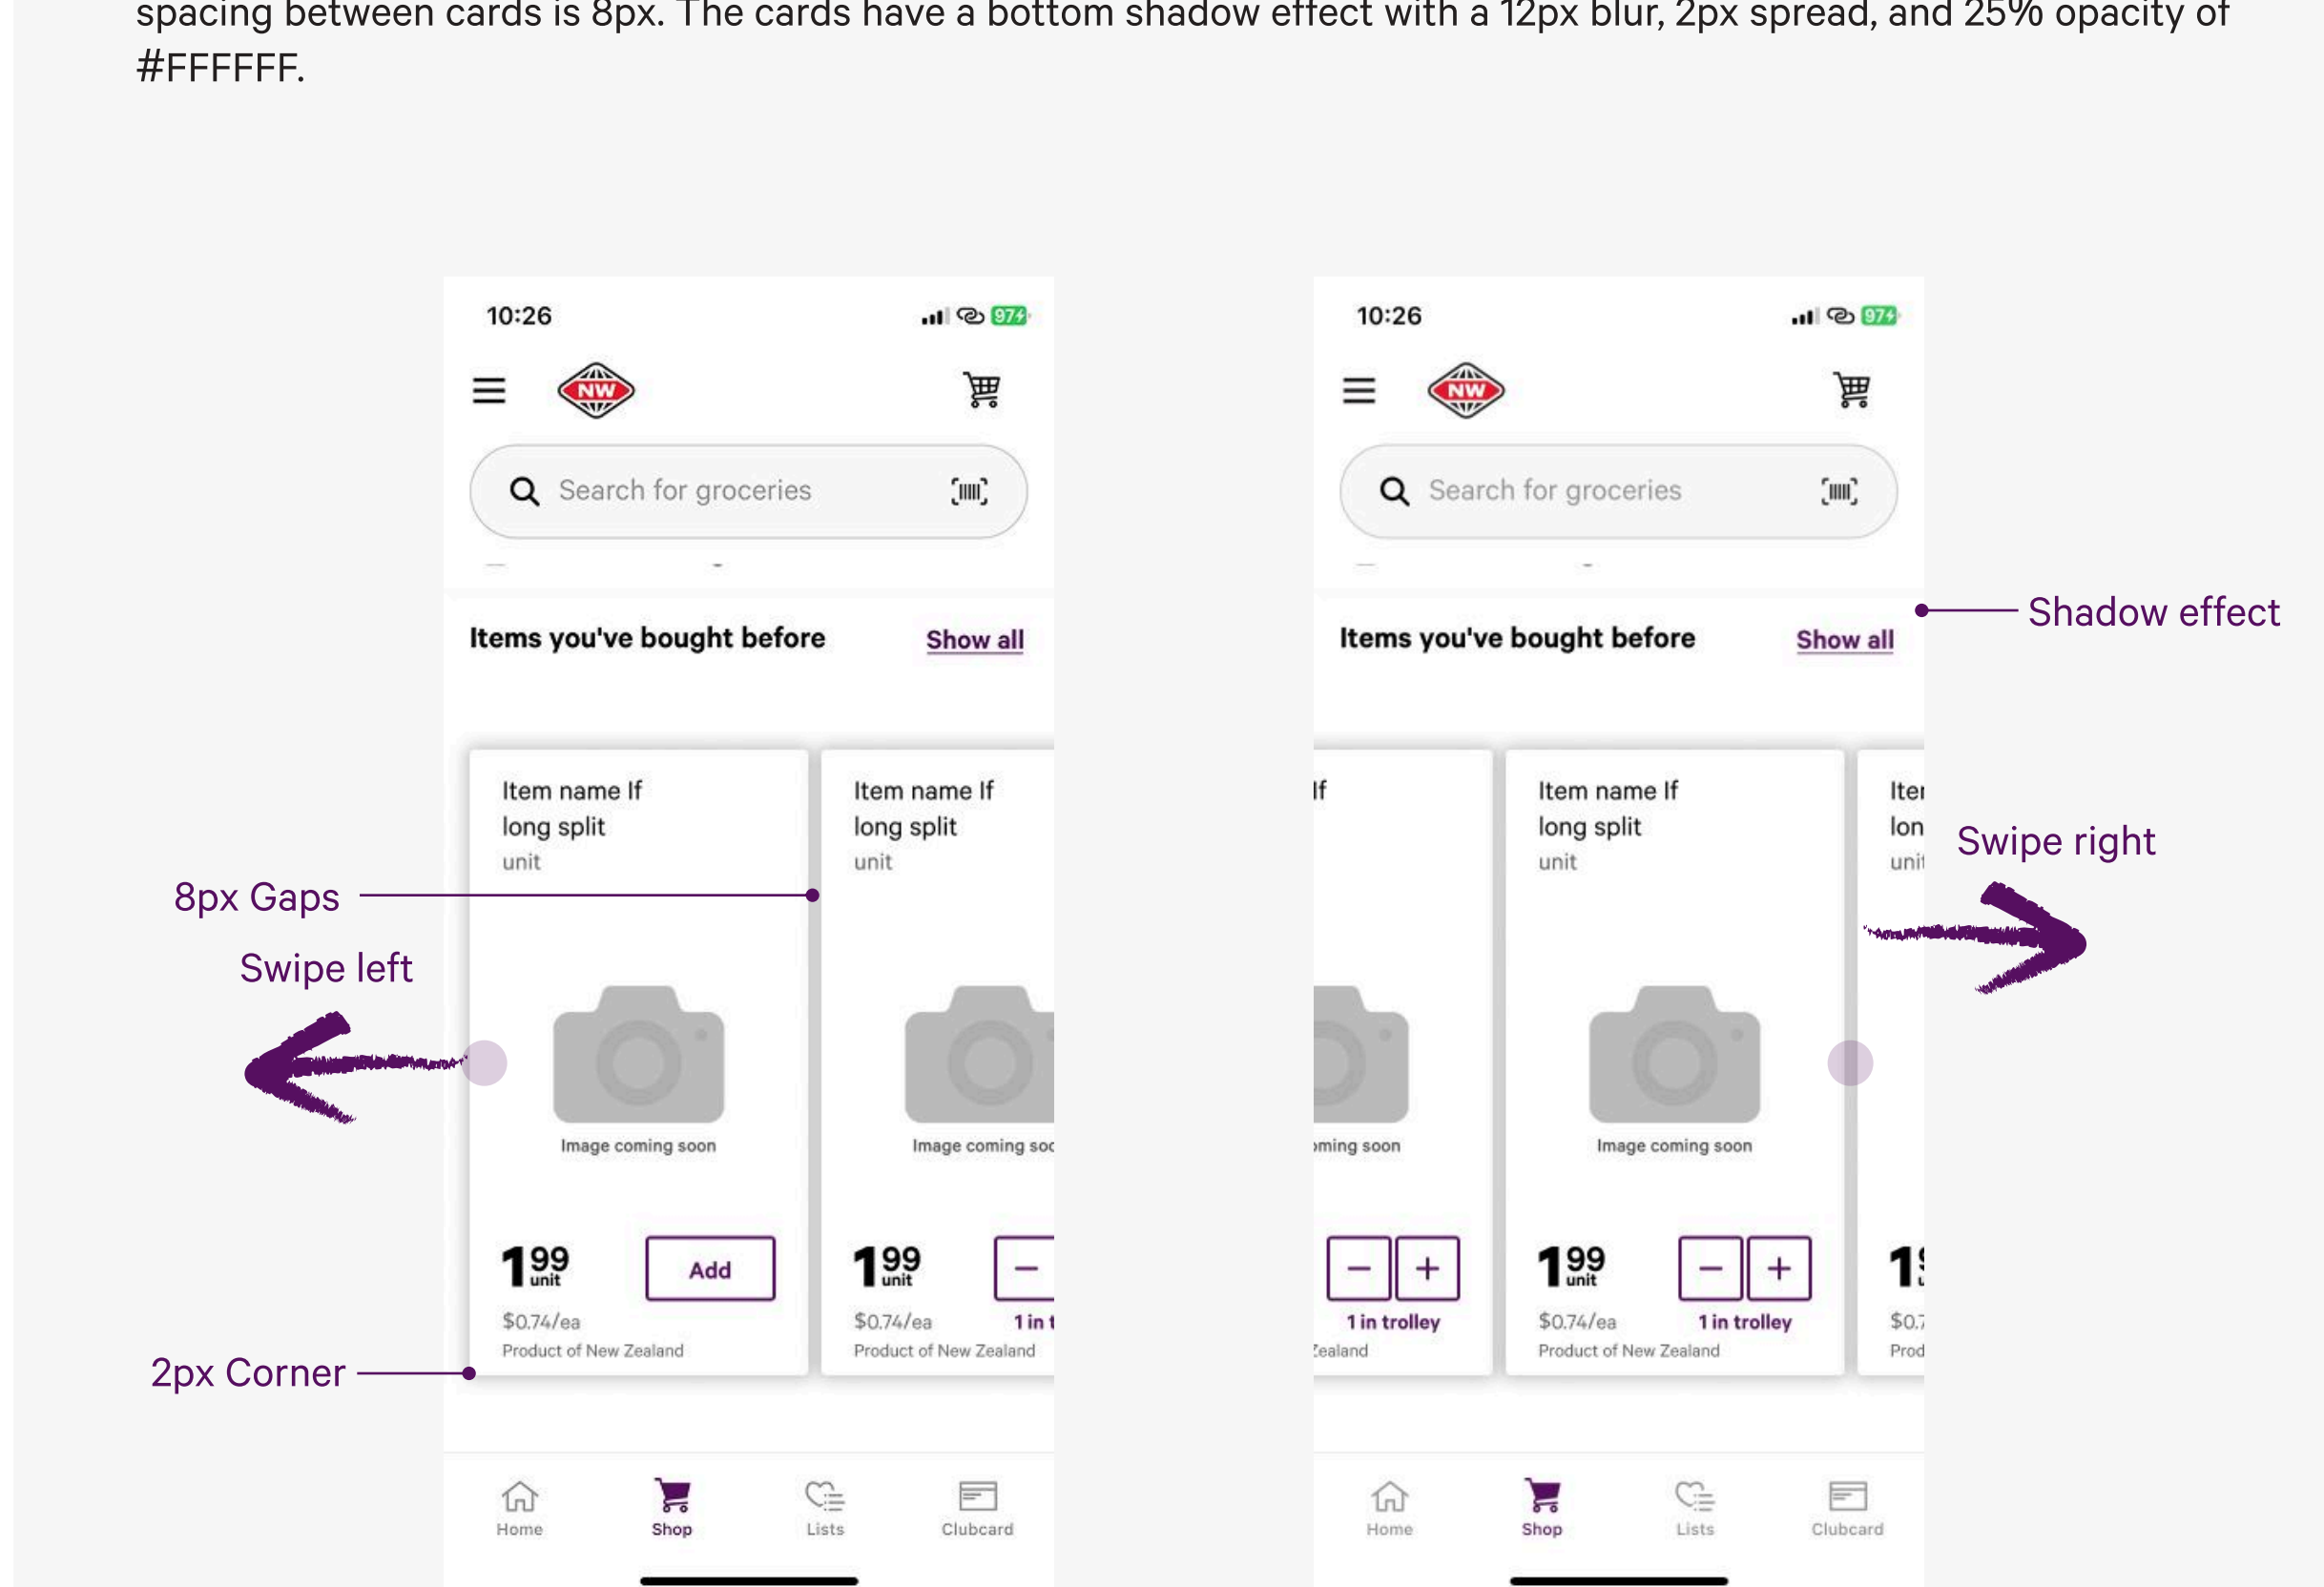

[Click to view Mobile Grid](#)

Carousel

The New World online platform also features a carousel arrangement of cards. This type of carousel is generally used for promotions, to inform users about previously purchased items, and for quick scrolling and selection. Its design principle is also based on the card unit component.

[Click to view Carousel and Grid](#)

[Click to view Mobile Carousel](#)

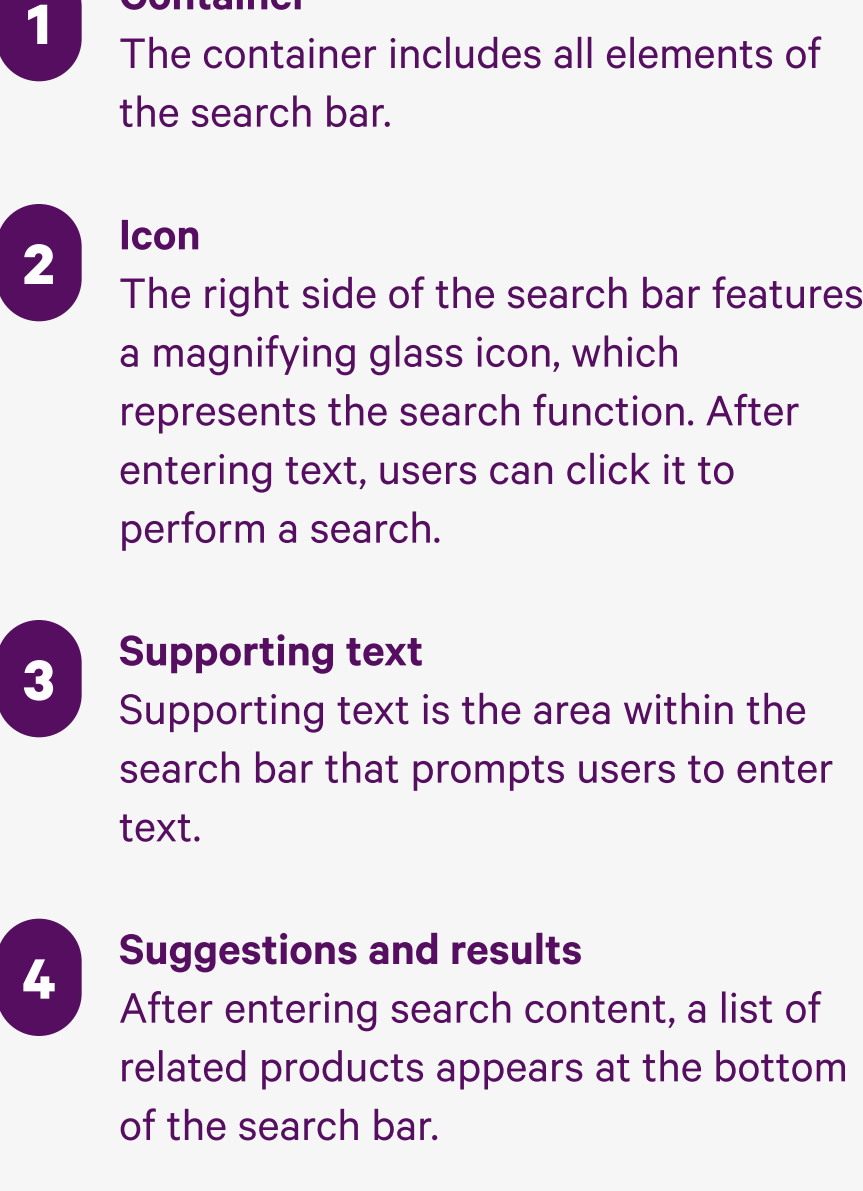

Search system

In New World's physical stores, the user is the moving object, navigating the space to find the products they need. On the online platform, the user is stationary, while the information moves.

The fluidity and seamlessness of the search function are crucial for users to accurately find the products they need. In our design system, we have two types of search bars: a regular search bar and a store-specific search bar. We also have a search bar with micro-interactions for the mobile experience.

Anatomy

The search bar consists of a container, a search icon, and placeholder text. It is embedded below the top navigation bar and is centered on the page.

Content Blocks

A diagram of a search bar with the following dimensions and labels:

- 3px**: Top border thickness.
- 10px**: Total height of the search bar.
- 16px**: Left padding.
- Body4**: Font size for the placeholder text.
- 24px X 24px**: Size of the search icon.
- 50px**: Right padding.
- Vary**: Label indicating that the width of the search bar is variable.

The search bar uses a #F6F6F6 gray background with 3px corner radii to maintain consistency with other components.

Search for groceries e.g. milk...

Search for groceries e.g. milk...

2px focus frame

Cancel button

apple

Royal Gala Apples Kg

Royal Gala Apples Kg

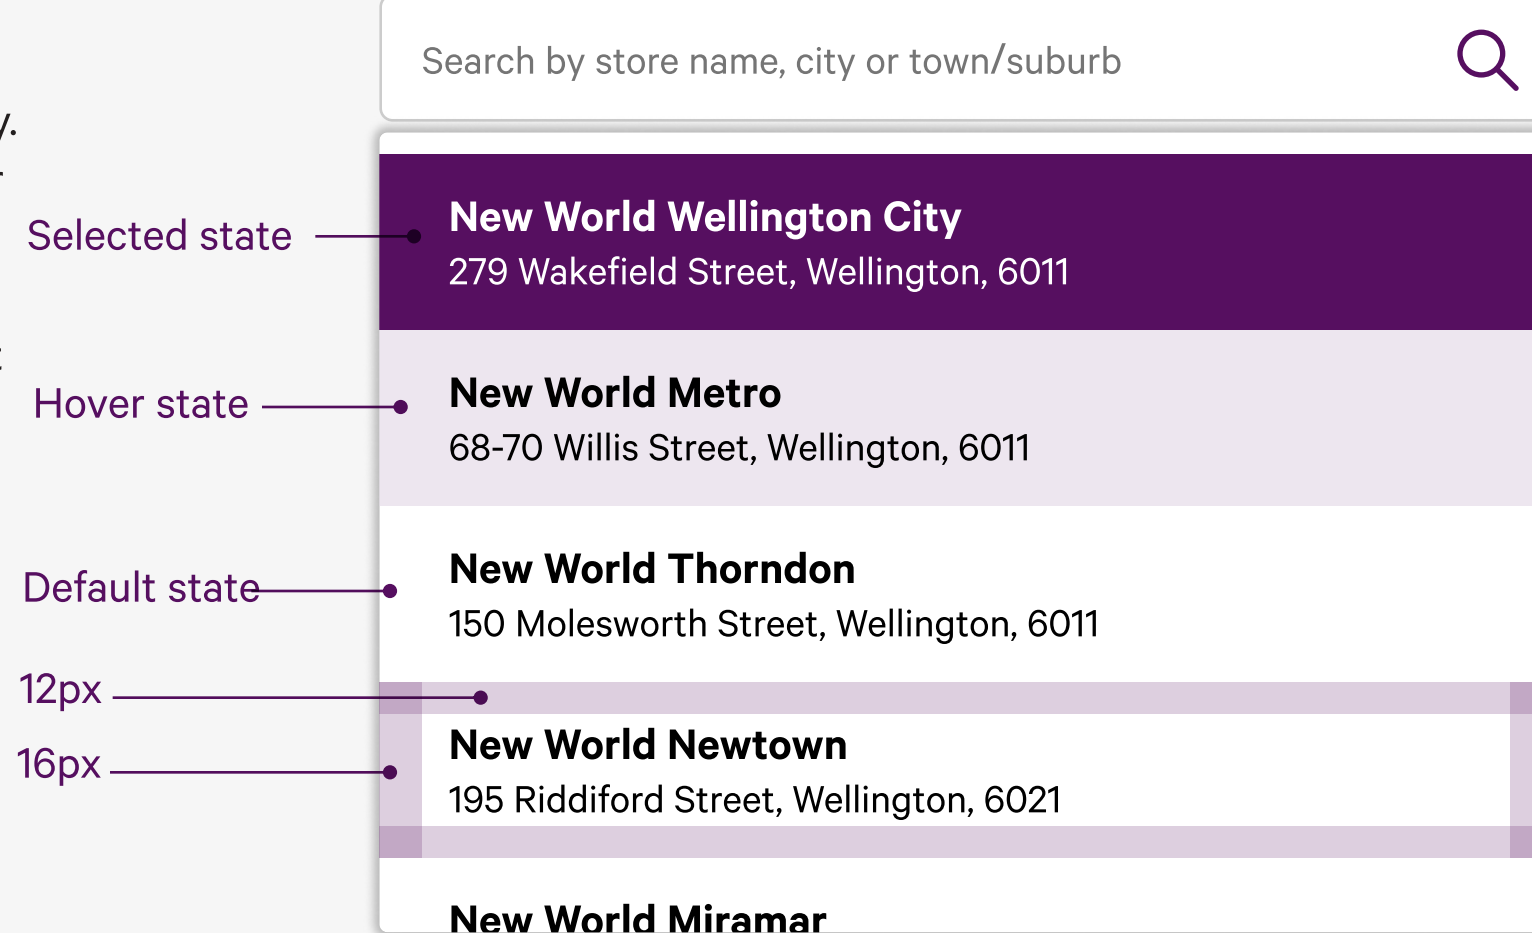

Royal Gala Apples Kg

View all results

The search view is a modal dialog that appears below the search bar. As a container, it includes recommended products and a text button. Its width is the same as the search bar. After entering text, a "cancel" button appears at the end of the search bar, allowing the user to clear their input.

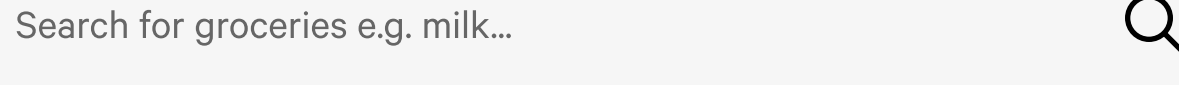

Collect from

Another type of search bar on the desktop is for users to select a store address for pickup or delivery. The default state of this search bar is consistent with the product search. However, the search view modal is different from the product search, using a purple color for status prompts.

Example

Search items

Search stores

Collect from

Mobile

The mobile search bar is more restricted by screen size than the desktop, but the height of the input field must meet accessibility standards. Additionally, the mobile version includes some micro-interactions to support search return or camera scan functions.

The diagram illustrates two header designs for a mobile application, with dimensions and font specifications.

Top Header (Vary):

- Search Bar:** A rounded rectangle with a radius of 56px. It contains a search icon (24px X 24px) and a scan icon (24px X 24px).
- Text:** "Search for groceries" in Heading6 font.
- Dimensions:** The search bar has a height of 28px. The scan icon is 24px wide and 24px high.

Bottom Header (Recent Searches):

- Return Button:** A left-pointing arrow with a width of 16px and a height of 16px.
- Search Bar:** A rounded rectangle with a radius of 24px. It contains a search icon (24px X 24px) and a scan icon (24px X 24px).
- Text:** "Search for groceries" in Heading6 font.
- Section Header:** "Recent Searches" in Heading6 font.
- List Item:** "Try searching for groceries or other items you'd like to purchase" in Body2 font.
- Dimensions:** The return button is 16px wide and 16px high. The search bar has a height of 24px. The list item text is in Body2 font.

The mobile search bar is more restricted by screen size than the desktop, but the height of the input field must meet accessibility standards. Additionally, the mobile version includes some micro-interactions to support search

The image displays two screenshots of a web application interface, illustrating a design change. The interface shows a list of cabbage products, each with a corresponding image and a plus icon for adding to the cart.

Top Screenshot (Initial State):

- Search bar: "cabbage"
- Product 1: Green **Cabbage** ea. Dimensions: 60px (height), 16px (width). A label "48px X 48px" points to the product image.
- Product 2: Green **Cabbage** Half ea.
- Product 3: Chinese **Cabbage** (Wong Bok) ea.
- Product 4: Red **Cabbage** Half ea.

Bottom Screenshot (After Change):

- Search bar: "cabbage"
- Product 1: Green **Cabbage** ea. A green checkmark icon indicates the change is complete. A label "After adding" points to the checkmark.
- Product 2: Green **Cabbage** Half ea.
- Product 3: Chinese **Cabbage** (Wong Bok) ea.
- Product 4: Red **Cabbage** Half ea.

In the mobile search bar's search view mode, recommended search results appear below the search box. The search box does not show a blue focus border. For the detailed size requirements of the view component, please refer to the system diagrams.
